1. Introduction

Contemporary educational systems face the responsibility of preparing learners to participate in an increasingly interconnected yet complex world, shaped by environmental, technological, linguistic, and cultural transformations. Within this context, the teaching of English in Ecuadorian schools extends beyond the acquisition of a foreign language and constitutes an ethical, pedagogical, and intercultural endeavor aligned with the constitutional principles of education as a lifelong right, oriented toward holistic human development and respectful coexistence among peoples and cultures.

This English as a Foreign Language curriculum for EGB Media promotes dialogue among knowledge traditions, recognizing the contributions of diverse intellectual traditions and the legitimacy of multiple epistemologies. English is conceived not as a language of hegemony but as a shared means of dialogue through which Ecuadorian learners engage with diverse perspectives while valuing and sharing their own cultural identities.

The curriculum adopts a competency-based approach by understanding language learning as the gradual ability to use English meaningfully in authentic contexts through the integration of knowledge, skills, attitudes, and values. Communicative competence is developed through the interrelated language skills of listening, speaking, reading, and writing, together with mediation and multiple semiotic resources that support meaning-making.

Designed for learners approximately nine to eleven years of age who are consolidating literacy in Spanish and, in many cases, languages of Ecuador, the curriculum builds upon previous English learning while expanding learners' communicative repertoire. It seeks to foster safe, inclusive, and meaningful learning environments where linguistic and cultural diversity becomes a resource for learning rather than a barrier.

Grounded in constitutional principles, current research, and constructivist, child-centered pedagogy, this proposal is guided by three commitments: the recognition of the plurality of languages, knowledges, and cultures, the dignity and active participation of every learner, and coherence among curricular foundations, competency descriptors, curricular organization, and classroom practice.

PROGRAMA PILOTO

2. Contribution of the English language curriculum to the development of the key competencies

The teaching of English at EGB Media does not stand outside the network of key competencies; it is woven into that network from the first day of class, contributing in distinctive ways to each thread without losing its identity as the construction of a new language. The operational descriptors that organize this sublevel — gathered, for each competency, around situated practices that learners can actually carry out at A2 — are the route through which English makes its contribution visible. Read together, they show a curriculum in which language learning, citizenship, science, art, technology, well-being, and emotion form one fabric rather than disconnected threads.

Competencia comunicativa (CC) finds in English a privileged context for expansion at EGB Media. As learners locate and interpret information from familiar texts, distinguish reliable information using simple criteria, recognize implicit ideas, express opinions about texts from different cultures, and produce short multimodal texts for familiar audiences, they develop the ability to communicate purposefully and meaningfully. By using English to meet everyday communication needs at school and in the community, they also become more aware of how the languages in their repertoire interact, strengthening both their English proficiency and their understanding of their own.

Competencia matemática y en ciencia y tecnología (CMCT) is meaningfully integrated into English learning at EGB Media. Learners use English to apply basic mathematical and scientific concepts, explain natural phenomena, collect and represent data, and communicate their observations and findings through tables, graphs, diagrams, posters, and short presentations. They also design and present simple prototypes, participate in environmental projects, and propose practical solutions to everyday challenges while recognizing both scientific inquiry and ancestral knowledge as valuable sources of understanding. In this way, English becomes a tool for scientific thinking, problem-solving, and engagement with the natural world.

Competencia ciudadana, identidad y conciencia cultural (CCICC) is further developed at EGB Media through the use of English to explore Ecuador's history, cultural heritage, and democratic participation. Learners reflect on children's rights, school life, and situations that promote inclusion, fairness, and respect for others while expressing informed opinions about issues relevant to their communities. They compare cultural practices across contexts, appreciate both local and global perspectives, and develop responsible ways of communicating about people, cultures, and traditions. In this way, English becomes a language for active citizenship, intercultural dialogue, and mutual understanding.

At EGB Media, *Competencia digital* (CD) is developed through the purposeful and responsible use of digital technologies. Learners search for and evaluate information in English, collaborate in the creation of shared digital texts, and produce simple digital products for authentic audiences while acknowledging the sources of the content they

PROGRAM PHOTO

use. They develop safe and ethical digital practices by protecting personal information, recognizing online risks, and using digital tools responsibly. They also use English to describe simple technological processes, address basic technical issues, and explain the purpose of their digital creations.

Competencia en innovación y transformación (CIT) is fostered at EGB Media through purposeful engagement with learners' immediate environment. Learners identify everyday challenges and opportunities for improvement, generate and refine simple solutions, and make informed decisions that consider the needs of others and the environmental and social impact of their actions. They plan and implement collaborative projects, organize available resources, adapt their plans when needed, and work respectfully with others while recognizing that digital tools can support—but not replace—collaboration and shared responsibility.

Competencia socioemocional (CSE) is strengthened at EGB Media as learners develop the language to recognize, express, and reflect on their emotions. They make responsible decisions, regulate their emotions, seek support when needed, and take responsibility for their actions. They also demonstrate empathy by recognizing the feelings of others, promoting inclusion, communicating respectfully, and building positive relationships through collaboration and dialogue in English and the languages of their communities.

Competencia de expresiones culturales y artísticas (CECA) is enriched through English learning at EGB Media as learners respond to artistic and cultural expressions, communicate their interpretations through a variety of formats, and share cultural experiences with respect and responsibility. They engage with the traditions of their own communities and those of diverse English-speaking contexts, recognizing literature and the arts as expressions of multiple identities, perspectives, and ways of understanding the world.

PROGRAMA PILOTO

3. Curricular Threads

Thread 1: Oral comprehension

Oral comprehension at EGB Media builds on learners' previous development at the A1 listening level and prepares them to engage with English in a wider range of voices, contexts, and communicative purposes. Exposure to different accents, speech patterns, and authentic spoken texts broadens learners' ability to understand English as a global language while fostering flexible listening skills.

At this sublevel, oral comprehension extends beyond linguistic features to include non-linguistic cues such as gestures, visual supports, situational context, and tone of voice. Learners are guided to interpret these elements alongside spoken language in order to understand meaning, purpose, and the structure of oral texts, gradually transferring these strategies to new listening situations.

The descriptors for this thread focus on identifying the main idea and relevant details, following sequenced information, distinguishing different speakers and communicative intentions, and interpreting emotions and purposes in a variety of oral texts. To achieve this, learners develop explicit listening strategies, including listening for gist and specific information, making predictions, requesting clarification, taking simple notes, and comparing interpretations with others. The ultimate goal is to foster increasingly autonomous listeners who can approach new spoken texts with confidence and effective ways of constructing meaning.

Thread 2: Oral interaction and production

Oral interaction and production at EGB Media aim to foster learners' confidence and independence as English users by creating meaningful opportunities for authentic communication beyond teacher-directed exchanges. Classroom interaction prioritizes pair and group work, discussions, role-plays, presentations, and collaborative activities in which learners use English to share experiences, describe people, places, and events, present the outcomes of their learning, and participate actively in everyday communicative situations.

This thread recognizes that developing oral proficiency depends not only on linguistic knowledge but also on learners' willingness to speak. Teachers therefore promote a supportive environment in which English is viewed as a means of communication rather than a model of perfection. Exposure to diverse varieties of English, together with respect for learners' own linguistic identities, reinforces the idea that intelligible communication is more important than perfect pronunciation. Constructive feedback, acceptance of mistakes as part of learning, and a positive classroom climate enable learners to participate with increasing autonomy, effectiveness, and willingness to communicate in spoken interaction.

Thread 3: Reading comprehension

Reading comprehension at EGB Media builds on learners' literacy development in Spanish and other languages of their communities, supported by carefully selected texts that respond to their age, interests, and English proficiency. The approach integrates key dimensions of reading development: phonological awareness, sound-letter relationships, vocabulary growth, background knowledge, and comprehension as an active process of meaning construction.

Reading is understood as a multidimensional practice that involves decoding, understanding explicit information, making inferences, identifying the purpose and audience of texts, recognizing cultural perspectives, and connecting reading with personal knowledge and experiences. These dimensions develop together, requiring teachers to integrate work on language, vocabulary, comprehension, and critical engagement rather than treating them as isolated stages.

PROGRAMA PILOTO

This thread embraces a broad understanding of texts, including narratives, informational texts, literary works, digital texts, and functional texts, each with its own purpose and structure. Learners encounter diverse forms of literature and communication from different communities, including contemporary works, oral traditions, Ecuadorian authors, and texts from contexts where English is used. In this way, reading becomes an encounter with multiple perspectives, languages, and ways of understanding the world.

Thread 4: Written production

Written production at EGB Media guides learners from supported, model-based writing toward increasingly autonomous and purposeful text creation. Learners produce short texts such as narratives, descriptions, comparisons, opinions, invitations, and brief reports, progressively developing the ability to organize and communicate their own ideas in English.

This development occurs through a gradual writing process in which learners move from using models and guided structures to creating their own texts. Teachers provide appropriate scaffolds, including vocabulary support, sentence frames, graphic organizers, peer feedback, and revision strategies, while fostering a classroom environment where writing is planned, drafted, revised, and shared with different audiences.

Written production also promotes metalinguistic awareness. With teacher guidance, learners recognize basic features of written English, including spelling patterns, punctuation, connectors, and grammatical structures, while comparing similarities and differences with their own languages. Errors are understood as part of the learning process and as opportunities to reflect, revise, and develop greater control over written communication.

Across the four skills, the proposal's unity is held together by the same commitments that opened this document: plurality, dignity, and coherence. Oral comprehension, oral interaction and production, reading comprehension, and written production are four dimensions of one capacity for meaning-making, anchored in the constitutional horizon of an intercultural, plurinational, secular, and holistic education, oriented by a constructivist pedagogy in dialogue with contemporary research on reading, attentive to the rich semiotic life of childhood and early adolescence, and committed to making English, in Ecuadorian EGB Media classrooms, a meaningful addition to learners' linguistic and cultural lives.

PROGRAMA PILOTO

4. Specific Competency Matrix

Specific competency	Assessment indicators
SC.EFL3.1. Using simple narratives and basic descriptions to playfully describe daily activities and games, communicating what is done, with whom, where, and when, and recognizing play as shared knowledge transmitted across generations. CC, CCCC, CSE.	**I.EFL.3.1.1.** Narrates daily activities and playground games orally, using the simple present and present continuous in connected sentences linked with basic connectors (and, then, after) to clarify the sequence of actions. **I.EFL.3.1.2.** Describes who, where, and when for shared games, including roles, rules, and turns, using short, clear English expressions that a listener unfamiliar with the game can follow.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.1.d.1. Features of English: short, simple sentences; high-frequency vocabulary; basic connectors; and familiar pronunciation patterns encountered in everyday communication at school and in the community. **EFL.3.2.d.6.** Vocabulary for expanded daily routines and free-time activities: household chores, school schedules, hobbies, sports, and leisure at home and in the community. **EFL.3.4.d.15.** Simple past for narration: regular and high-frequency irregular verbs (was/were, went, had, said, made, came), affirmative, negative, and question forms used to recount events and experiences. **EFL.3.4.d.19.** Present continuous for ongoing and planned actions: use for what is happening right now and for near-future arrangements (We are meeting tomorrow).	**EFL.3.2.p.5.** Narrates daily activities, games, and routines using connected sentences with basic sequence connectors and simple past or present tense forms.	**EFL.3.1.a.1.** Shows curiosity about the ways of saying, telling, and naming things in English and in other languages. **EFL.3.2.a.3.** Is willing to speak, read, and write in English throughout the school year, treating errors as a natural part of learning.

PROGRAMA PILOTO

Methodological Guidelines

The development of this competency is fostered through meaningful, student-centered learning experiences that connect English with learners' cultural knowledge, community experiences, and everyday practices. Learning begins with questions and reflections about familiar contexts, allowing students to recognize their own knowledge as a starting point for exploring other perspectives and cultural practices.

Project-Based Learning (PBL) provides the methodological foundation for this process, guiding learners to investigate, organize, create, and communicate their learning through an authentic product developed for a real audience. Through collaborative projects, learners gather information from their families and communities, transform their findings into English texts and multimodal resources, and revise their work based on feedback and interaction with others.

This project-based approach promotes inclusive participation by allowing learners to contribute through different pathways according to their needs, strengths, and ways of communicating. Students may use visual supports, peer collaboration, home languages, alternative modes of expression, or additional scaffolding to access the same learning goals and contribute meaningfully to the shared product.

This approach is complemented by Design Thinking processes that encourage learners to empathize, define needs and challenges, generate ideas, create prototypes, test solutions, and improve their products. Throughout the process, teachers provide meaningful language support, while collaborative roles promote participation, responsibility, and the development of communication skills in English.

Interdisciplinary Connections

This competency connects English learning with other curricular areas through the exploration of games as cultural, social, and communicative practices. In Language and Literature, learners develop written production by creating instructional and narrative texts in English while recognizing connections between English and their home languages. In Physical Education, they integrate vocabulary and communication related to body movements, rules, and participation in games.

The connection with Social Studies allows learners to recognize games as expressions of community knowledge, cultural identity, and practices transmitted across generations and contexts. Mathematics is integrated through activities involving counting, measurement, patterns, and the use of numerical information related to games. Cultural and Artistic Education contributes through visual representations of movement, illustrations, and the artistic expression embedded in chants and traditions. Natural Sciences is connected through reflections on care for the environment and the responsible use and reuse of materials.

Through these connections, English becomes a means to explore, communicate, and value knowledge from different areas of learning while promoting interdisciplinary and inclusive experiences.

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.2. Actively and attentively listening to recorded news and announcements about the school, community, and local environment to identify main ideas and key details and to understand different perspectives on everyday events, recognizing multiple voices and ways of telling. CC, CCCC, CSE	**I.EFL.3.2.1.** Identifies the main idea and at least two key details (who, what, where, when) in short recorded news items, announcements, or reports about the school, the community, or the place where people live. **I.EFL.3.2.2.** Notes, using key words, simple drawings, or short phrases, what two different sources or speakers say about the same event, showing awareness that events can be described in different ways. **I.EFL.3.2.3.** Demonstrates attentive listening by producing a short oral or written response that includes at least one key word or detail from the recording.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.4.d.16. Future with will and be going to: use of will for announcements and spontaneous decisions and be going to for plans and intentions in short texts and oral exchanges. **EFL.3.1.d.28.** Sustained listening for specific information: strategies for attending to short recordings — such as news, announcements, short videos, and interviews—to identify main ideas, key details, and the speaker's purpose.	**EFL.3.1.p.1.** Identifies the main idea and key details (who, what, where, when) in short, recorded news, announcements, and informational videos about the school, the community, and the natural world.	**EFL.3.1.a.7.** Listens attentively to the stories, opinions, and recommendations of classmates, family members, and community members, in English and in the languages of the place.

PROGRAM PILOTO

Methodological Guidelines

The development of this competency is fostered through meaningful listening experiences connected to real communicative contexts, allowing learners to explore who communicates, to whom, for what purpose, and from which perspective. Through exposure to diverse oral texts from different English-speaking contexts and local communities, learners recognize that messages reflect particular voices, experiences, and choices about what information is included.

Project-Based Learning (PBL), supported by inquiry-based learning, provides the methodological foundation for this process. Learners investigate different oral sources, identify main ideas and relevant details, organize information, compare perspectives, and communicate their findings through collaborative products. This process encourages learners to develop listening strategies while understanding oral communication as a social practice shaped by context and purpose.

Throughout the process, teachers provide linguistic support through meaningful language routines and structured strategies that guide learners in identifying key information, reflecting on different perspectives, and sharing their interpretations. Collaborative work promotes participation, responsibility, and the development of increasingly autonomous listeners who engage critically and respectfully with diverse voices.

Interdisciplinary Connections

This competency connects English learning with other curricular areas through the exploration of oral communication as a social and cultural practice. In Language and Literature, learners develop listening comprehension and oral communication skills by identifying main ideas, relevant details, purposes, and the organization of oral texts while recognizing that messages reflect particular perspectives.

The connection with Social Studies allows learners to understand how news, announcements, and community messages represent different experiences, histories, and cultural contexts. Natural Sciences is integrated through oral texts related to environmental care, conservation, and actions that promote responsible relationships with the natural world.

Mathematics contributes through the organization and interpretation of information involving dates, quantities, measurements, and simple records connected to real communicative contexts. Cultural and Artistic Education is incorporated through attention to sound, music, and other expressive elements that accompany oral messages and shape meaning. Physical Education connects through activities that relate spoken messages to movement, participation, and interaction with community and natural environments.

Through these interdisciplinary connections, English becomes a means to interpret, communicate, and reflect on knowledge from different areas while valuing diverse voices and contexts.

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.3. Understanding everyday transactions and exchanges in the community through dialogues to participate in social interactions and to describe how goods, services, and support are exchanged, recognizing both community-based and monetary forms of exchange. CC, CMCT, CCCC, CIT.	**I.EFL.3.3.1.** Participates in a short role-play or scripted dialogue about an everyday transaction (buying something, requesting a service, exchanging an object), using basic modals (can, could) and price or quantity expressions correctly. **I.EFL.3.3.2.** Describes, in short sentences, how goods, services, or support move between people in at least one community space (a market, a neighborhood, a cooperative), including examples that are not solely monetary.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.EFL.3.2.d.7. Vocabulary for community and neighborhood places: stores, markets, fairs, parks, clinics, libraries, transport stops, and services used in everyday life. **EFL.3.4.d.18.** Modals can, could, should, and must for ability, possibility, advice, and obligation: receptive and guided productive use in everyday transactions, guides, infographics, and agreements. **EFL.3.2.d.27.** Short oral interactions of everyday life: transactional and interactional exchanges in community settings — buying, asking, offering, inviting, thanking, apologizing — using familiar formulas and basic modals.	**EFL.3.2.p.10.** Participates in everyday transactions and exchanges: ask questions, respond, make requests, offer help, and thank others using basic modals and familiar formulas. **EFL.3.1p.41.** Asks for clarification, repetition, or an example when something is not understood.	**EFL.3.1.a.8.** Respects turn-taking and the time of whoever is speaking in exchanges, interviews, and class discussions.

PROGRAMA PILOTO

Methodological Guidelines

The development of this competency is fostered through meaningful learning experiences that connect English with learners' everyday environments, community practices, and ways of understanding exchange and collaboration. Learning begins by exploring familiar situations in which goods, services, support, and responsibilities move between people, allowing learners to recognize the different forms of exchange that exist within their communities and across cultures.

Project-Based Learning (PBL), complemented by case study approaches, provides the methodological foundation for this process. Learners investigate real examples of exchanges in their surroundings, gather information through observation and dialogue with community members, compare them with practices from other contexts, and communicate their findings through authentic multimodal products. This process encourages learners to use English to describe places, interactions, agreements, and the values underlying different forms of exchange.

Throughout the process, teachers provide meaningful language support through communicative routines that guide learners in describing experiences, asking questions, comparing perspectives, and expressing ideas. Collaborative work promotes participation, responsibility, and reflection on how communities organize relationships of cooperation, reciprocity, and support.

Interdisciplinary Connections

This competency connects English learning with other curricular areas through the exploration of exchange, cooperation, and community practices as meaningful social experiences. In Language and Literature, learners develop dialogic and informational texts by writing short conversations, describing community practices, and reading about different forms of exchange across contexts.

The connection with Social Studies allows learners to understand how communities organize relationships of cooperation, reciprocity, and support, recognizing that different forms of exchange are part of social and cultural life. Mathematics is integrated through the use of prices, quantities, calculations, measurements, and records related to real-life exchange situations.

Cultural and Artistic Education contributes through the observation and representation of community spaces, objects, and practices, while Natural Sciences is connected through reflections on responsible resource use, environmental care, and the relationship between exchanges and the natural environment. Physical Education is incorporated through collaborative activities that involve organizing spaces, movement, and participation in community-based practices.

Through these interdisciplinary connections, English becomes a means to explore, describe, and value the ways communities create relationships, solve needs, and share resources.

PROGRAM PILOTO

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.4. Recording and organizing information from short informational videos using written outlines to identify, structure, and share learning about the community, the natural world, and other contexts, recognizing videos as one of multiple sources of information. CC, CD, CMCT.	**I.EFL.3.4.1.** Writes a simple outline in English — with a title, key words, and at least two short sentences — that organizes what has been learned from the video and can be shared with classmates. **I.EFL.3.4.2.** States one thing that surprised them and one question that remains unanswered, recognizing the video as one source among many.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.3.d.4. Familiarity with common everyday English text types, including short narratives, announcements, blog posts, illustrated messages, infographics, invitations, guides, and basic agreements used in school and community contexts. **EFL.3.1.d.5.** Knowledge of basic spoken and written English conventions, including capitalization, end punctuation (period, question mark, exclamation mark), basic comma use, common spelling patterns of high-frequency words, and basic pronunciation features such as short and long vowel sounds, word stress, and simple intonation patterns. **EFL.3.4.d.9.** Vocabulary for weather, seasons, and the natural environment: climate, landscapes, ecosystems, plants, and animals of the place and other regions. **EFL.3.4.d.20.** Sentence connectors of sequence, contrast, and cause: first, then, after, before, finally (sequence); however, although (contrast); because, so (cause/result), used in narratives and explanations. **EFL.3.4.d.23.** Informational texts (guides, infographics, questionnaires): short factual texts that explain, instruct, or present data using numbered steps, headings, icons, and visual cues. **EFL.3.1.d.28.** Sustained listening for specific information: strategies for attending to short recordings — such as news, announcements, short videos, and interviews—to identify main ideas, key details, and the speaker's purpose.	**EFL.3.1.p.1.**Identifies the main idea and key details (who, what, where, when) in short, recorded news, announcements, and informational videos about the school, the community, and the natural world. **EFL.3.1.p.3.** Follows sequenced instructions in short videos to complete tasks, play games, and participate in classroom activities. **EFL.3.3.p.21.** Locates explicit information and begin to infer simple implied information in short texts used in the classroom. **EFL.3.4.p.23.** Drafts simple written outlines from short informational videos, using titles, key words, and short sentences to organize and share what has been learned. **EFL.3.3.p.40.** Uses illustrated dictionaries and simple digital tools with teacher support to expand vocabulary.	**EFL.3.1.a.23.** Shares with confidence what is being learned, the questions that arise, and the discoveries made in classroom activities. **EFL.3.3.a.24.** Is committed to responsible digital behavior: asks permission before sharing, cites sources, and respects what circulates in the classroom and online.

PROGRAMA PILOTO

Methodological Guidelines

The development of this competency is fostered through meaningful learning experiences that use audiovisual resources as starting points for inquiry, reflection, and oral communication. Learners analyze informational videos by identifying what they communicate, what they omit, and how different sources contribute to understanding a topic. Through this process, students develop the ability to interpret information critically and construct their own messages based on diverse perspectives.

Project-Based Learning (PBL), supported by inquiry-based learning and a STEAM approach, provides the methodological foundation for this process. Learners explore topics related to the natural world, gather information from different sources, organize their ideas, and transform their findings into short oral productions for authentic audiences. The use of audiovisual materials, scientific information, and community knowledge allows learners to connect English with real-world contexts.

Throughout the process, teachers provide meaningful language support through communicative routines that guide learners in organizing ideas, using relevant vocabulary, expressing findings, and sharing questions. Collaborative work promotes participation, responsibility, and the development of confident and increasingly autonomous oral communicators.

Interdisciplinary Connections

This competency connects English learning with other curricular areas through the exploration of the natural world, community knowledge, and the communication of information through oral reports. In Language and Literature, learners develop oral communication skills by transforming information from short informational videos into organized reports, identifying key ideas, listening attentively, and using visual resources to support meaning.

The connection with Social Studies allows learners to recognize the natural world as a shared space shaped by different communities and ways of living, including practices related to fishing, farming, herding, conservation, and guiding. Natural Sciences is integrated through the identification of species, ecosystems, and environmental practices, strengthening the understanding of living systems and responsible use of shared resources.

Mathematics contributes through the interpretation and communication of numerical information from videos, including quantities, measurements, and simple data related to the natural world. Cultural and Artistic Education supports the creation of diagrams, visual representations, and other resources that communicate ideas about natural and community contexts. Physical Education connects through the development of voice, breathing, posture, and body awareness involved in preparing and presenting oral productions.

Through these interdisciplinary connections, English becomes a means to explore, communicate, and value knowledge about the natural world, community experiences, and the diverse ways people understand and care for their environments.

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.5. Recognizing technological devices used at home, at school, and in the community through basic conversations in English and learners' languages to identify device names, functions, and care practices, recognizing technology as a tool for learning and daily life. CC, CD, CMCT.	**I.EFL.3.5.1.** Names common technological devices and their basic functions in English, using correct vocabulary and concise descriptive sentences. **I.EFL.3.5.2.** Asks and answers basic questions about how to use and care for a device, using modals (can, should) and short imperative instructions in a classroom conversation or role-play. **I.EFL.3.5.3.** Provides at least two concrete examples of how technology supports learning or everyday life at home, at school, or in the community, using short, simple sentences.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.1d.1. Features of English: short, simple sentences; high-frequency vocabulary; basic connectors; and familiar pronunciation patterns encountered in everyday communication at school and in the community. **EFL.3.4.d.12.** Vocabulary for technology and digital devices: device names, parts, functions, and care practices used at home, at school, and in the community. **EFL.3.4.d.18.** Modals can, could, should, and must for ability, possibility, advice, and obligation: receptive and guided productive use in everyday transactions, guides, infographics, and agreements. **EFL.3.4.d.21.** Question forms including how often, how long, and how much/many: Wh- questions, yes/no questions, and basic indirect question structures (Can you tell me...?) used in interviews, inquiries, and conversations. **EFL.3.2.d.27.** Short oral interactions of everyday life: transactional and interactional exchanges in community settings — buying, asking, offering, inviting, thanking, apologizing — using familiar formulas and basic modals.	**EFL.3.2.p.10.** Participates in everyday transactions and exchanges: ask questions, respond, make requests, offer help, and thank others using basic modals and familiar formulas. **EFL.3.2.p.13.** Sustains short conversations about technological devices: name them, describe their use, and ask for help to solve a simple difficulty. **EFL.3.1.p.41.** Asks for clarification, repetition, or an example when something is not understood.	**EFL.3.2.a.9.** Asks for help when needed and offers it when possible.

PROGRAMA PILOTO

Methodological Guidelines

The development of this competency is supported through meaningful, student-centered learning experiences that connect English with the technological objects learners encounter in their everyday lives. Learning begins by identifying familiar devices and reflecting on their purposes, uses, and care through short conversations in English and the languages of the community. Technology is approached neither as an object of dependence nor as a threat, but as a tool that requires responsible use, shared agreements, and thoughtful decision-making.

Project-Based Learning (PBL), complemented by dialogic and conversational role-play, provides the methodological foundation for this process. Learners develop short oral conversations about familiar devices, exploring what they are used for, how they work, who uses them, and how they are cared for. Through an authentic classroom product, learners prepare and share their conversations with different audiences, using English as a means of communication and interaction.

Throughout the process, teachers provide meaningful language routines and opportunities for practice, while collaborative roles encourage participation, active listening, and responsibility. Learners gradually develop confidence in expressing ideas orally, asking questions, and communicating responsible relationships with the technologies present in their daily environments.

Interdisciplinary Connections

This competency connects English learning with other curricular areas through the exploration of everyday technologies, their uses, and the responsible relationships people establish with the tools around them. In Language and Literature, learners develop oral communication skills by participating in short conversations, asking and answering questions, and creating brief informational cards that describe familiar devices and their functions.

The connection with Social Studies allows learners to recognize how devices are part of family, school, and community life, and how their uses and meanings vary across different contexts. Natural Sciences is integrated through the exploration of how devices work, including basic aspects related to energy, movement, sound, and light, as well as through reflections on care, repair, and responsible use.

Mathematics contributes through identifying and communicating quantities, parts, steps, and simple measurements related to everyday devices. Cultural and Artistic Education supports the representation of objects through device cards, drawings, and simple prototypes. Physical Education connects through the development of voice, breathing, and posture required for oral interaction and communication.

Through these interdisciplinary connections, English becomes a means to describe, understand, and communicate about the technologies present in learners' daily lives while promoting responsible and meaningful use.

Program in Pilot

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.6. Collaborating to organize classroom and community events by issuing invitations in English and learners' languages to agree on roles, time, and place, promoting shared responsibility and participation in community life. CC, CCCC, CIT, CSE.	**I.EFL.3.6.1.** Writes a simple invitation in English that includes who, what, when, where, and why, with correct capitalization and basic punctuation. **I.EFL.3.6.2.** Agrees with classmates on roles, tasks, materials, and times, using basic future forms (be going to, will) and sequence connectors in short spoken or written exchanges. **I.EFL.3.6.3.** Actively participates in the gathering and briefly reflects — in English or the language of the classroom — on how the collaborative process went, mentioning at least one thing that worked well.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.2.d.3. Understanding that English is part of a shared multilingual repertoire used in the classroom and school to support communication, learning, and participation. **EFL.3.4.d.13.** Vocabulary for food preparation and community practices: ingredients, cooking actions, names of shared dishes, and practices of preparing and sharing food. **EFL.3.2.d.14.** Vocabulary for civic and school life: gatherings, celebrations, agreements, roles, shared spaces, rules, and school projects. **EFL.3.4.d.16.** Future with will and be going to: use of will for announcements and spontaneous decisions and be going to for plans and intentions in short texts and oral exchanges. **EFL.3.4.d.19.** Present continuous for ongoing and planned actions: use for what is happening right now and for near-future arrangements (We are meeting tomorrow). **EFL.3.4.d.26.** Functional texts (invitations, warnings, agreements, school notices): short purposeful texts that organize shared life, set expectations, and communicate rights and responsibilities in the school and community. **EFL.3.2.d.27.** Short oral interactions of everyday life: transactional and interactional exchanges in community settings — buying, asking, offering, inviting, thanking, apologizing — using familiar formulas and basic modals.	**EFL.3.2.p.6.** Describes places, people, objects, and community practices using concrete details and simple comparisons. **EFL.3.2.p.11.** Invites and agrees with classmates on tasks, gatherings, and celebrations using basic future forms and sequence connectors. **EFL.3.4.p.36.** Uses words from other languages known within English sentences as cultural bridges, and name objects, practices, and places in both English and the community language. **EFL.3.3.p.42.** Notices similarities and differences between English and the languages known to support comprehension and production. **EFL.3.4.p.47.** Plans a task, celebration, or school project with classmates by distributing roles, materials, and timelines.	**EFL.3.2.a.2.** Accepts English as one of many languages, equally valid for understanding the world and meeting new people. **EFL.3.2.a.4.** Values the languages of Ecuador and the local community as part of the classroom's shared repertoire. **EFL.3.1.a.5.** Respects people who speak different languages and appreciates words from local languages when they appear in the classroom. **EFL.3.2.a.22.** Cooperates with classmates in shared tasks and projects, sustaining the collective effort from beginning to end.

PROGRAM PILOTO

Methodological Guidelines

The development of this competency is supported through meaningful, student-centered learning experiences that connect English with learners' experiences of gathering, sharing, and interacting with others. Learning begins by exploring familiar events and planning a real classroom gathering in which learners use English to communicate, organize, and participate with others. The focus of the competency is oral interaction, recognizing that communication involves not only words but also gestures, sounds, images, and the organization of spaces.

Project-Based Learning (PBL), complemented by a multimodal and multiliteracies approach, provides the methodological foundation for this process. Learners work collaboratively to organize a real gathering for an authentic audience and create multimodal invitations that combine spoken and written English, visual resources, sounds, gestures, and spatial arrangements. Through this process, learners explore how different systems of meaning work together to communicate intentions and welcome others.

Throughout the project, teachers provide language routines and opportunities for rehearsal, while collaborative roles encourage participation, responsibility, and interaction. Learners gradually develop their ability to communicate meaningfully in English by using multiple forms of expression and engaging with others in real social contexts.

Interdisciplinary Connections

This competency connects English learning with other curricular areas through the planning and experience of meaningful gatherings in which learners communicate through multiple forms of expression.

In Language and Literature, learners develop oral and written communication by preparing invitations, organizing information about who, what, when, where, and why, and participating in short purposeful exchanges with different audiences.

The connection with Social Studies allows learners to recognize gatherings as social and cultural practices that reflect family, school, and community life, while valuing the diversity of traditions and ways of participating in shared spaces. Cultural and Artistic Education is integrated through the creation of posters, sounds, gestures, and spatial arrangements that support communication through visual, auditory, gestural, and spatial forms. Physical Education contributes through the use of voice, posture, movement, and body language involved in welcoming and interacting with others. Mathematics is connected through organizing the gathering by using time, quantities, materials, and simple schedules, while Natural Sciences contributes through reflections on food choices, care of materials, and the responsible use of shared resources during the event.

Through these interdisciplinary connections, English becomes a means to organize, participate in, and communicate meaningful experiences with others through different systems of meaning.

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.7. Explaining common community practices through simple oral presentations that describe how and why they are carried out, recognizing community members as bearers of living knowledge. CC, CCCC, CAEC.	I.EFL.3.7.1. Presents a common community practice orally in English — such as a craft, a method of preparing food, a celebration, or a communal gathering — and describes, in at least three sentences, how and why it is carried out. I.EFL.3.7.2. Names the people who sustain the practice and refers to them as bearers of knowledge, using respectful and concrete language. I.EFL.3.7.3. Supports the presentation with at least one visual element (photograph, drawing, object, or diagram) that a classmate can examine to better understand the practice.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.4.d.13. Vocabulary for food preparation and community practices: ingredients, cooking actions, names of shared dishes, and practices of preparing and sharing food. **EFL.3.4.d.20.** Sentence connectors of sequence, contrast, and cause: first, then, after, before, finally (sequence); however, although (contrast); because, so (cause/result), used in narratives and explanations. **EFL.3.3.d.22.** Short narratives and chronicles: personal stories, event recounts, community chronicles, and travel accounts with a clear beginning, middle, and end. **EFL.3.4.d.31.** Presentation of information with visual support: strategies for combining spoken or written text with images, diagrams, and graphic organizers to share findings, recommendations, or project results with a familiar audience. **EFL.3.4.d.32.** Shared practices of the community passed down across generations: games, celebrations, food preparation, crafts, songs, and ways of caring that are transmitted within families and communities and recognized as living knowledge.	**EFL.3.2.p.6.** Describes places, people, objects, and community practices using concrete details and simple comparisons. **EFL.3.2.p.48.** Cooperates with others in collective productions and share orally what has been learned at the close of a stage or project.	**EFL.3.2.a.3.** Is willing to speak, read, and write in English throughout the school year, treating errors as a natural part of learning. **EFL.3.1.a.15.** Enjoys and values the community's stories, rhymes, games, celebrations, and shared cultural practices.

PROGRAMA PILOTO

Methodological Guidelines

The development of this competency is grounded in meaningful learning experiences that connect English with the knowledge, practices, and traditions of learners' families and communities. Learning begins by exploring familiar activities and recognizing community knowledge as a valuable resource that can be shared with others through English, while respecting and preserving local languages and cultural identities.

Project-Based Learning (PBL) provides the methodological framework, engaging learners in the documentation and presentation of authentic community practices through collaborative projects developed for real audiences. Working from a community-based and ethnographic approach, learners observe, interview, and gather information from community members, transforming their findings into short oral presentations supported by visual resources that communicate what a practice is, how it is carried out, why it is important, and who preserves it.

Throughout the process, teachers provide linguistic support through meaningful language routines while collaborative roles encourage active participation, shared responsibility, careful observation, and effective oral communication. English is presented as a means to document, value, and share community knowledge rather than replace the languages and cultural practices from which that knowledge originates.

Interdisciplinary Connections

This competency connects English learning with other curricular areas through the exploration, documentation, and communication of community knowledge and cultural practices.

In Language and Literature, learners develop oral and written communication by preparing short presentations, listening to community members, and producing brief informational texts that accompany their presentations.

The connection with Social Studies enables learners to recognize that community practices reflect the social, cultural, and economic life of different communities while valuing the people who preserve and transmit living knowledge across generations.

Natural Sciences is integrated through the observation and description of materials, natural processes, resources, and environmental conditions associated with community practices. Cultural and Artistic Education contributes through the representation and appreciation of traditional knowledge, cultural expressions, and locally significant practices.

Mathematics supports the interpretation and communication of quantities, measurements, time, and sequences involved in everyday community activities, while Physical Education reinforces the use of voice, posture, and oral presentation skills required to communicate effectively with different audiences.

Through these interdisciplinary connections, English becomes a means to document, communicate, and value the knowledge, traditions, and experiences that shape learners' communities.

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.8. Exploring personal and community experiences through short interviews with family, neighbors, and classmates, using basic questions to gather stories and memories while respecting individuals' choices about what to share. CC, CCCC, CSE.	**I.EFL.3.8.1.** Formulates at least four interview questions (Wh- and yes/no) appropriate for asking family members, neighbors, or classmates about their anecdotes, memories, or experiences. **I.EFL.3.8.2.** Listens attentively to the responses, asks for clarification at least once (e.g., "Could you repeat that?" or "What do you mean by...?"), and records the responses in a brief written note or a simple diagram. **I.EFL.3.8.3.** Reports the interview findings to classmates in short English sentences, respecting what the interviewee wished to share and what they did not.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.1d.1. Features of English: short, simple sentences; high-frequency vocabulary; basic connectors; and familiar pronunciation patterns encountered in everyday communication at school and in the community. **EFL.3.2.d.10.** Vocabulary for jobs, trades, and workplaces: names of occupations, tools, tasks, and work settings common to the community. **EFL.3.4.d.21.** Question forms including how often, how long, and how much/many: Wh- questions, yes/no questions, and basic indirect question structures (Can you tell me...?) used in interviews, inquiries, and conversations. **EFL.3.3.d.22.** Short narratives and chronicles: personal stories, event recounts, community chronicles, and travel accounts with a clear beginning, middle, and end. **EFL.3.1.d.28.** Sustained listening for specific information: strategies for attending to short recordings — such as news, announcements, short videos, and interviews—to identify main ideas, key details, and the speaker's purpose.	**EFL.3.2.p.7.** Presents community practices, trades, and celebrations orally in English with visual support such as photographs, drawings, or objects. **EFL.3.2.p.9.** Shares orally what has been learned from an inquiry, a reading, or an interview, using short and clear statements. **EFL.3.2.p.12.** Conducts short interviews with family members, neighbors, and classmates by formulating Wh- and yes/no questions and recording their answers.	**EFL.3.1.a.5.** Respects people who speak different languages and appreciates words from local languages when they appear in the classroom. **EFL.3.1.a.7.** Listens attentively to the stories, opinions, and recommendations of classmates, family members, and community members, in English and in the languages of the place. **EFL.3.1.a.8.** Respects turn-taking and the time of whoever is speaking in exchanges, interviews, and class discussions. **EFL.3.1.a.11.** Respects what each person chooses to share and what they prefer not to share in interviews and conversations.

PROGRAMA PILOTO

Methodological Guidelines

The development of this competency is supported through meaningful learning experiences that promote authentic communication with people who use English in different personal, educational, professional, or community contexts. Learning begins by identifying individuals within learners' own environments and broader communities whose experiences can be explored through respectful dialogue and inquiry.

Project-Based Learning (PBL) provides the methodological framework, engaging learners in the design, preparation, implementation, and documentation of short interviews developed for authentic purposes. Through an inquiry-based and dialogic interviewing approach, learners formulate questions, conduct interviews, actively listen, clarify information, and organize their findings into shared records that communicate the experiences and perspectives of others.

Throughout the process, teachers provide linguistic support through meaningful language routines that facilitate questioning, clarification, active listening, and respectful interaction. Collaborative roles promote participation, responsibility, and effective oral communication while fostering ethical interviewing practices based on empathy, consent, and respect for the interviewee.

Interdisciplinary Connections

This competency connects English learning with other curricular areas through the planning, implementation, and communication of interviews that explore people's experiences, knowledge, and perspectives.

In Language and Literature, learners develop oral and written communication by designing interview questions, practicing active listening, recording information, and preparing short reports based on the ideas shared by others.

The connection with Social Studies enables learners to explore how personal experiences, work, migration, and community life contribute to understanding the social, cultural, and historical diversity of Ecuador and other contexts. Natural Sciences is integrated when interviews address environmental phenomena, natural resources, or community practices related to the natural world.

Cultural and Artistic Education contributes through the creation and organization of audio recordings, visual displays, and other resources that preserve and communicate community voices and experiences. Mathematics supports the interpretation and communication of quantitative information, such as measurements, time, distances, quantities, and other numerical data that emerge during interviews.

Physical Education reinforces the use of voice, posture, attentive listening, and interpersonal communication skills required for effective and respectful interaction during interviews.

Through these interdisciplinary connections, English becomes a means to investigate, document, and share the experiences and perspectives of individuals while fostering meaningful dialogue and respect for diverse voices.

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.9. Engaging in intercultural reading of literary texts, such as stories, rhymes, and poems created by children and communities in different contexts, to identify similarities and differences in experiences, traditions, and ways of life, fostering openness to intercultural understanding. CC, CCCC, CAEC.	**I.EFL.3.9.1.** Reads a short story, rhyme, or poem from a community that learns or uses English in a different place and identifies the main idea and at least two key images or events. **I.EFL.3.9.2.** Names at least one similarity and one difference between experiences, traditions, or ways of life in the text and in the reader's own community, using brief comparative sentences. **I.EFL.3.9.3.** Shares, in one or two sentences, what surprised them or connected with their own experience, showing openness to the voices and stories encountered.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.1.d.2. Awareness of common varieties of English found in the region and around the world, including different voices, accents, intonation patterns, and regional expressions. **EFL.3.2.d.3.** Understanding that English is part of a shared multilingual repertoire used in the classroom and school to support communication, learning, and participation. **EFL.3.3.d.24.** Short literary texts (rhymes, short stories, riddles): creative, playful texts from communities that learn or use English in different places, including illustrated stories and riddles that invite language play. **EFL.3.3.d.29.** Intercultural reading with mediation between languages: strategies for reading English texts with support from community languages and visual elements, and for translating meaning between English and the languages of the place. **EFL.3.3.d.36.** Everyday life in English-speaking communities: routines, foods, games, school life, celebrations, and ways of life that show the diversity of English-speaking communities worldwide.	**EFL.3.1.p.2.** Distinguishes different voices, accents, and ways of telling in recordings from communities that learn or use English in different places. **EFL.3.3.p.16.** Reads illustrated stories, rhymes, and poems from communities that learn or use English in different places, identifying main ideas and key images. **EFL.3.3.p.22.** Recognizes the basic structure of narrative and informational texts: opening, development, and closing. **EFL.3.4.p.36.** Uses words from other languages known within English sentences as cultural bridges, and name objects, practices, and places in both English and the community language. **EFL.3.1.p.39.** Practices the pronunciation of new words and phrases by consulting oral models such as audio recordings, videos, the teacher, or a classmate.	**EFL.3.1.a.1.** Shows curiosity about the ways of saying, telling, and naming things in English and in other languages. **EFL.3.1.a.5.** Respects people who speak different languages and appreciates words from local languages when they appear in the classroom.

PROGRAMA PILOTO

Methodological Guidelines

The development of this competency is supported through meaningful reading experiences that engage learners with diverse literary texts from different cultures and communities where English is learned and used. Learning begins with shared reading and guided discussion, gradually promoting greater independence as learners interpret texts, make personal connections, and explore multiple perspectives through literature.

Project-Based Learning (PBL) provides the methodological framework, engaging learners in collaborative reading projects centered on the exploration, discussion, and presentation of short literary texts. Through a literature circles approach, learners read, discuss, compare, and reflect on literary works while connecting them with stories, oral traditions, and literary expressions from their own communities.

Throughout the process, teachers provide linguistic support through meaningful reading routines that encourage vocabulary development, comprehension, interpretation, and personal response to texts. Collaborative roles promote active participation, dialogue, critical thinking, and the appreciation of literature as a shared social and cultural experience.

Interdisciplinary Connections

This competency connects English learning with other curricular areas through the shared reading, discussion, and appreciation of short literary texts from diverse communities and cultures. In Language and Literature, learners strengthen reading comprehension by reading aloud, retelling stories, comparing literary texts, and expressing personal responses to what they read. They also develop an appreciation of literary diversity by connecting texts in English with stories, rhymes, poems, and oral traditions from their own communities.

The connection with Social Studies allows learners to explore the geographic, cultural, and social contexts where literary texts are produced, recognizing that stories reflect different ways of living, traditions, and perspectives from Ecuador and other parts of the world. Natural Sciences is integrated whenever literary texts describe animals, plants, landscapes, seasons, or ecosystems, encouraging learners to relate the natural environments presented in the texts to those found in their own communities.

Cultural and Artistic Education contributes through the appreciation and creation of literary and artistic expressions, including illustrations, classroom anthologies, poems, and creative responses inspired by the readings. Mathematics is incorporated through the recognition of patterns, sequences, repetition, rhythm, and counting structures commonly found in children's rhymes, poems, and repetitive literary texts.

Through these interdisciplinary connections, English becomes a means to read, interpret, compare, and enjoy literature while strengthening cultural awareness, creativity, critical thinking, and meaningful connections between children's own experiences and those of other communities.

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.10. Dramatizing short literary texts through simple dialogues, gestures, and visual support to retell stories from different communities, recognizing the emotions and experiences expressed in the narratives. CC, CSE, CAEC.	**I.EFL.3.10.1.** Participates in a reenactment of a short literary work using simple memorized or scripted dialogue, clear gestures, voice modulation, and at least one visual aid (costume item, prop, or drawing). **I.EFL.3.10.2.** Names at least two emotions or sensations a character feels in the story, linking each to a specific moment in the reenactment. **I.EFL.3.10.3.** Cooperates with classmates during preparation and performance, contributing ideas and respecting the group' s decisions.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.3.d.24. Short literary texts (rhymes, short stories, riddles): creative, playful texts from communities that learn or use English in different places, including illustrated stories and riddles that invite language play. **EFL.3.4.d.32.** Shared practices of the community passed down across generations: games, celebrations, food preparation, crafts, songs, and ways of caring that are transmitted within families and communities and recognized as living knowledge.	**EFL.3.1.p.4.** Recognizes emotions, intentions, and purposes in short dialogues, narratives, and theatrical reenactments. **EFL.3.2.p.8.** Recites and dramatize rhymes, riddles, short literary passages, and dialogues with appropriate intonation and expression. **EFL.3.1.p.38.** Uses images, gestures, sounds, and drawings to support comprehension and production when English words alone are not enough. **EFL.3.1.p.39.** Practices the pronunciation of new words and phrases by consulting oral models such as audio recordings, videos, the teacher, or a classmate.	**EFL.3.1.a.15.** Enjoys and values the community's stories, rhymes, games, celebrations, and shared cultural practices.

PROGRAMA PILOTO

Methodological Guidelines

This competency is developed through Project-Based Learning (PBL) enriched with a drama-in-education approach, where literary texts become opportunities for children to communicate meaning through voice, movement, gesture, and collaboration. Learning moves beyond reading aloud as learners interpret, rehearse, and perform short literary works, understanding that dramatic reenactment is another way of constructing meaning from a text.

The learning process revolves around the recurring project “Small Stages: A Round of Short Theatrical Reenactments in English.” Working in teams, learners select a short literary text, organize it into a sequence of brief scenes, rehearse collaboratively, and present a short dramatization supported by simple props and visual elements. Alongside the performance, each team prepares a short programme card introducing the title, origin of the literary work, participants, and the main emotions conveyed through the story.

The project follows an inquiry-oriented process in which learners first explore the literary text, identify its main events, characters, emotions, and setting, and then make collaborative decisions about how these elements can be represented through dialogue, gestures, movement, and simple visual supports. Throughout the process, the teacher scaffolds learning with brief English routines such as Who is speaking?, What happens next?, How does the character feel?, Show the feeling with your voice and body., and What does this scene tell us?

Collaborative work is organized through rotating roles that allow every learner to participate in different aspects of the production. The scene mapper organizes the story into short scenes and identifies the sequence of events; the line keeper supports classmates in rehearsing and remembering their dialogue; the gesture coach helps coordinate movement, facial expression, and body language with spoken language; the prop and visual keeper prepares the simple materials that support each scene; and the feelings reader identifies the emotions expressed throughout the story and helps classmates communicate them effectively during the performance. Rotating these responsibilities ensures that all learners experience both visible and behind-the-scenes contributions while developing communication, collaboration, creativity, and confidence in using English for meaningful artistic expression.

Interdisciplinary Connections

This competency connects English learning with other curricular areas through the interpretation, dramatization, and performance of short literary works. In Language and Literature, learners strengthen reading comprehension by exploring literary texts, organizing stories into scenes, rehearsing dialogues, and presenting short dramatizations supported by gestures, voice, and simple visual elements. They also develop oral expression and confidence by communicating meaning through performance.

The connection with Cultural and Artistic Education allows learners to explore dramatic expression through movement, gesture, voice, visual supports, props, and stage organization while appreciating literature as a form of artistic creation. Physical Education is integrated through activities that develop body awareness, posture, coordination, movement, breathing, and expressive communication, all of which contribute to effective dramatic performance.

Social Studies contributes by encouraging learners to recognize the cultural and geographical origins of the literary works they perform, fostering respect for the diversity of communities, traditions, and perspectives represented in the texts. Socio-emotional Education is strengthened as learners identify emotions expressed by literary characters, communicate their own feelings appropriately, collaborate respectfully during rehearsals, and develop empathy, active listening, and shared responsibility within the group.

The project also connects with School Projects and Practical Life through the collaborative planning and organization of performances, the preparation of simple materials and programme cards, and the collective management of rehearsals and presentations, promoting responsibility, cooperation, and project organization.

Through these interdisciplinary connections, English becomes a means to interpret literature, communicate emotions, collaborate creatively, and experience dramatic expression as a shared learning process that integrates language, art, movement, and cultural understanding.

PROGRAM PILOTO

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.11. Identifying historical memories through stories, chronicles, and testimonies from the community, the country, and the world, comparing what has changed and what has remained, and understanding history as a set of multiple perspectives and voices. CC, CCCC.	**I.EFL.3.11.1.** Reads a short chronicle or testimony in English, identifies the time, place, and people involved, and records them in a simple written form. **I.EFL.3.11.2.** States in two or three sentences what has changed and what has remained over time, based on the text, using simple past and present tense forms. **I.EFL.3.11.3.** Recognizes that the chronicle or testimony is one voice among many and names at least one other voice or perspective that could be part of the same story.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.1.d.2. Awareness of common varieties of English found in the region and around the world, including different voices, accents, intonation patterns, and regional expressions. **EFL.3.4.d.15.** Simple past for narration: regular and high-frequency irregular verbs (was/were, went, had, said, made, came), affirmative, negative, and question forms used to recount events and experiences. **EFL.3.4.d.17.** Comparatives and superlatives: regular and common irregular forms (bigger, more important, the tallest, the most common) used to compare places, objects, people, and practices. **EFL.3.4.d.20.** Sentence connectors of sequence, contrast, and cause: first, then, after, before, finally (sequence); however, although (contrast); because, so (cause/result), used in narratives and explanations. **EFL.3.3.d.22.** Short narratives and chronicles: personal stories, event recounts, community chronicles, and travel accounts with a clear beginning, middle, and end. **EFL.3.3.d.29.** Intercultural reading with mediation between languages: strategies for reading English texts with support from community languages and visual elements, and for translating meaning between English and the languages of the place. **EFL.3.3.d.33.** Cultural productions from the community and other places: stories, songs, dances, visual arts, films, and crafts made by communities in Ecuador and in other regions as examples of diverse aesthetic and expressive traditions. **EFL.3.3.d.34.** Historical memories and testimonies: chronicles, oral accounts, photographs, objects, and timelines that record important moments from the community, the country, and the world from the perspective of different voices.	**EFL.3.1.p.1.** Identifies the main idea and key details (who, what, where, when) in short, recorded news, announcements, and informational videos about the school, the community, and the natural world. **EFL.3.1.p.2.** Distinguishes different voices, accents, and ways of telling in recordings from communities that learn or use English in different places. **EFL.3.3.p.17.** Reads short chronicles and testimonies to identify what has changed, what remains, and what can be learned from different memories of the past. **EFL.3.3.p.22.** Recognizes the basic structure of narrative and informational texts: opening, development, and closing. **EFL.3.1.p.37.** Summarizes, orally or in writing, the information read or heard in another language in English in the classroom.	**EFL.3.2.a.4.** Values the languages of Ecuador and the local community as part of the classroom's shared repertoire. **EFL.3.3.a.16.** Values the living memory of the place and the country as knowledge that is transmitted and cared for across generations.

PROGRAMA PILOTO

Methodological Guidelines

This competency is developed through Project-Based Learning (PBL) enriched with an inquiry-based and historical-source approach, where learners explore short chronicles and testimonies as meaningful accounts of people, places, and events across different communities and periods of time. Through guided reading and mediation, learners discover that texts can be interpreted, summarized, compared, and explained while preserving the original voice and meaning.

The learning process revolves around the recurring project "Voices in Time: A Small Wall of Chronicles and Testimonies." Working collaboratively, learners select two short texts—one from their own context and another from a different community—read them carefully, identify their main ideas, and prepare concise English summaries, paraphrases, and comparative reflections. Each team creates a wall card highlighting the time, place, speaker, changes, and continuities described in the text, contributing to a collective timeline that connects different voices and experiences.

The project follows an inquiry-oriented process in which learners examine historical sources, identify key information, distinguish between change and continuity, compare different perspectives, and mediate information through summaries, paraphrases, explanations, and short comparisons. Throughout the process, the teacher supports learning with brief English routines such as Who is speaking?, When did this happen?, What changed?, What stayed the same?, Can you explain this in another way?, and What other voice could tell this story?

Collaborative work is organized through rotating roles that encourage active participation throughout the inquiry. The source reader identifies the people, place, and time described in the text; the paraphrase keeper prepares simple summaries and explanations of key ideas; the change-and-continuity reader identifies what has changed and what has remained over time; the second-voice seeker considers additional perspectives that could enrich the account; and the wall keeper prepares the visual display and connects the team's work with that of other groups. Rotating these responsibilities allows every learner to participate in reading, interpreting, mediating, and presenting historical narratives while developing communication, collaboration, critical thinking, and intercultural understanding through English.

Interdisciplinary Connections

This competency connects English learning with other curricular areas through the reading, interpretation, and mediation of short chronicles and testimonies that explore people, places, and events across time. In Social Studies, learners develop historical thinking by locating events in time and place, recognizing change and continuity, considering multiple perspectives, and understanding how personal and community experiences contribute to collective memory and cultural identity.

The connection with Language and Literature allows learners to strengthen reading comprehension by working with short informational and biographical texts, producing summaries, paraphrases, and brief written reflections, while developing mediation skills that help communicate meaning across languages and contexts. Learners also reflect on how different voices and perspectives shape the way stories are told.

Natural Sciences is integrated whenever chronicles and testimonies describe natural environments, ecosystems, seasons, or environmental changes, encouraging learners to relate historical accounts to the natural world and to reflect on the relationship between people and their environment over time. Cultural and Artistic Education contributes through the collaborative design of the classroom timeline, visual displays, illustrations, and other creative representations that help organize and communicate historical narratives.

Mathematics supports learning through the interpretation of dates, ages, time intervals, distances, quantities, and chronological sequences, helping learners organize information and construct simple timelines. The competency also connects with Socio-emotional Education by encouraging empathy, respectful listening, appreciation of diverse life experiences, and responsible participation in the collective construction of shared memory.

Through these interdisciplinary connections, English becomes a means to explore historical narratives, mediate meaning, understand multiple perspectives, and value the memories and experiences that shape communities across different places and generations.

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.12. Understanding accounts of journeys and experiences across communities by reading, listening to, and retelling short texts in English and learners' languages to expand knowledge of the world and recognize travel and migration as learning experiences.CC, CCCC, CMCT, CAEC.	**I.EFL.3.12.1.** Reads, listens to, or views a short account of a journey or experience in a community different from one' s own and retells the main events in at least three short English sentences. **I.EFL.3.12.2.** Describes at least two features — a place, a climate, a plant, an animal, or a way of life — that appear in the account, using simple comparatives and descriptive sentences. **I.EFL.3.12.3.** States in one sentence something learned from the account that changed or broadened their view of the world.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.1.d.2. Awareness of common varieties of English found in the region and around the world, including different voices, accents, intonation patterns, and regional expressions. **EFL.3.2.d.8.** Vocabulary for transport and travel: means of transport, directions, distances, journeys, and experiences of moving between places. **EFL.3.3.d.22.** Short narratives and chronicles: personal stories, event recounts, community chronicles, and travel accounts with a clear beginning, middle, and end. **EFL.3.4.d.35.** The natural world of the place and other regions: ecosystems, landscapes, animals, and plants of Ecuador and the Americas, and the practices communities use to care for and live with the natural world. **EFL.3.3.d.36.** Everyday life in English-speaking communities: routines, foods, games, school life, celebrations, and ways of life that show the diversity of English-speaking communities worldwide.	**EFL.3.1.p.2.** Distinguishes different voices, accents, and ways of telling in recordings from communities that learn or use English in different places. **EFL.3.3.p.18.** Reads short accounts of journeys and experiences in communities different from one's own to broaden one's knowledge of the world. **EFL.3.4.p.45.** Compares the landscapes, climates, plants, and animals of Ecuador with those of other regions using short descriptive sentences and basic comparative forms.	**EFL.3.1.a.1.** Shows curiosity about the ways of saying, telling, and naming things in English and in other languages. **EFL.3.4.a.20.** Recognizes the natural world of Ecuador and the Americas as a shared home that deserves attention and protection.

PROGRAMA PILOTO

Methodological Guidelines

This competency is developed through Project-Based Learning (PBL) enriched with a geographic and ecological inquiry approach, where learners explore journeys, places, and ways of life through short travel accounts, diaries, informational texts, and other authentic reading materials. Through guided reading and collaborative inquiry, learners discover how different communities interact with their environments while developing the ability to describe places, compare landscapes, and reflect on the relationship between people and the natural world.

The learning process revolves around the recurring project "Journeys We Read: A Small Atlas of Places, Lives, and Ways of Care." Working collaboratively, learners select two short texts—one describing a distant place and another connected to their own province—read them carefully, identify key geographical, cultural, and environmental features, and prepare illustrated atlas pages that summarize the people, places, landscapes, community practices, environmental care, and new understandings gained through each journey.

The project follows an inquiry-oriented process in which learners observe and compare natural and human environments, identify similarities and differences between communities, describe landscapes and ways of life using simple English, and reflect on how travel and reading can broaden their understanding of the world. Throughout the process, the teacher supports learning with brief English routines such as Where is this place?, What does it look like?, What do people do there?, How do people care for nature?, How is this place similar to ours?, and What did we learn from this journey?

Collaborative work is organized through rotating roles that encourage active participation throughout the project. The place reader identifies the people, place, and context of the journey; the features describer compares landscapes, climates, plants, animals, and community life; the care-of-the-world reader identifies practices that promote environmental responsibility; the change-of-view writer reflects on new understandings gained from the reading; and the atlas page keeper prepares the team's atlas page and connects it with the work produced by other groups. Rotating these responsibilities allows every learner to participate in reading, describing, comparing, and interpreting places while developing communication, collaboration, geographical awareness, environmental responsibility, and intercultural understanding through English.

Interdisciplinary Connections

This competency connects English learning with Social Studies, Natural Sciences, Language and Literature, Mathematics, Cultural and Artistic Education, and socio-emotional development through the exploration of journeys, places, and the diverse ways people interact with and care for their environments. By reading and discussing short travel accounts and personal experiences, learners use English to describe places, compare communities, and reflect on how travel broadens perspectives while fostering respect for cultural and environmental diversity.

Social Studies allows learners to locate places on maps, explore human mobility, recognize the diversity of communities, and understand how geography, culture, and daily life shape people's experiences. Through reading about journeys from different regions and comparing them with their own, learners strengthen their understanding of geographic and cultural diversity.

Natural Sciences is integrated through the observation and description of climates, plants, animals, landscapes, and ecosystems presented in the texts. Learners also reflect on sustainable practices and responsible interactions with the natural environment, recognizing how different communities care for their local ecosystems.

Language and Literature contributes through the reading, interpretation, and retelling of short travel narratives, autobiographical texts, and descriptive accounts. Learners develop reading comprehension while producing brief oral and written descriptions, summaries, and personal reflections about the places and experiences they explore.

Mathematics supports learning through the interpretation of numerical information related to journeys, including distances, durations, heights, temperatures, and simple measurements. Learners also organize travel sequences and compare quantitative information presented in the texts.

Cultural and Artistic Education enriches the competency through the creation of visual representations such as maps, drawings, and illustrated atlas pages that accompany learners' descriptions. These activities encourage the appreciation of cultural expressions and the visual communication of knowledge about places and communities.

Socio-emotional development is strengthened as learners engage respectfully with stories from different cultures, listen to diverse perspectives, and reflect on how new experiences can transform their own understanding of the world. Through collaborative discussions and shared projects, learners develop empathy, openness, and appreciation for cultural and environmental diversity.

Through these interdisciplinary connections, English becomes a means to explore the world, compare places and ways of life, and communicate experiences that promote curiosity, intercultural understanding, and responsible citizenship.

PROGRAM PILOTO

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.13. Sharing aspects of daily life through short, illustrated blog entries in English that describe experiences, feelings, and learning, and recognizing everyday life as meaningful and worth recording. CC, CD.	**I.EFL.3.13.1.** Writes a short, illustrated blog entry that describes what the writer does, feels, or learns in their place of residence, using at least five connected sentences. **I.EFL.3.13.2.** Organizes the entry with a clear opening sentence, a brief development, and a closing that leaves the reader with something to think about, using basic connectors and time expressions. **I.EFL.3.13.3.** Reads a classmate's blog entry carefully and responds briefly in English — orally or in writing — showing that the entry has been read and understood.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.2.d.3. Understanding that English is part of a shared multilingual repertoire used in the classroom and school to support communication, learning, and participation. **EFL.3.3.d.4.** Familiarity with common everyday English text types, including short narratives, announcements, blog posts, illustrated messages, infographics, invitations, guides, and basic agreements used in school and community contexts. **EFL.3.1.d.5.** Knowledge of basic spoken and written English conventions, including capitalization, end punctuation (period, question mark, exclamation mark), basic comma use, common spelling patterns of high-frequency words, and basic pronunciation features such as short and long vowel sounds, word stress, and simple intonation patterns. **EFL.3.2.d.6.** Vocabulary for expanded daily routines and free-time activities: household chores, school schedules, hobbies, sports, and leisure at home and in the community. **EFL.3.4.d.15.** Simple past for narration: regular and high-frequency irregular verbs (was/were, went, had, said, made, came), affirmative, negative, and question forms used to recount events and experiences. **EFL.3.4.d.25.** Digital texts (blog entries, illustrated posts): short written texts with images, headings, and hyperlinks that share everyday experiences, opinions, or recommendations for a school or community audience. **EFL.3.4.d.30.** Collaborative written production: stages and strategies for drafting, revising, and sharing texts in pairs and small groups — planning with notes, writing a first version, giving and receiving short feedback, and presenting a final product.	**EFL.3.2.p.5.** Narrates daily activities, games, and routines using connected sentences with basic sequence connectors and simple past or present tense forms. **EFL.3.3.p.19.** Reads illustrated blog entries to recognize aspects of the writer's daily life and connect them to one's own experience. **EFL.3.4.p.24.** Writes short, illustrated blog entries in English and the community's languages about everyday life in the places where the writer lives. **EFL.3.4.p.36.** Uses words from other languages known within English sentences as cultural bridges, and name objects, practices, and places in both English and the community language. **EFL.3.3.p.42.** Notices similarities and differences between English and the languages known to support comprehension and production.	**EFL.3.2.a.3.** Is willing to speak, read, and write in English throughout the school year, treating errors as a natural part of learning. **EFL.3.2.a.6.** Recognizes the languages of the place as a bridge for understanding English and for making oneself understood.

PROGRAM PILOTO

Methodological Guidelines

To develop this competency, learning begins with children's everyday experiences and the meaningful routines that shape their lives at home, at school, and in their communities. Through authentic examples of short blog entries, illustrated journals, photo essays, and personal reflections, learners discover that ordinary moments—helping with household tasks, walking to school, spending time with family members, or participating in community activities—can become valuable stories to share. English becomes a tool for describing familiar experiences, organizing ideas chronologically, and communicating personal perspectives to real readers.

The teacher creates opportunities for learners to observe, discuss, and document moments from their daily lives before transforming them into short written texts. Learners explore how effective blog entries combine written language with visual elements such as photographs, drawings, or captions to strengthen communication. Whether produced digitally or on paper, these multimodal texts encourage children to recognize that their everyday experiences are meaningful and worthy of being shared with others.

The methodology that best supports this competency is Project-Based Learning (PBL), complemented by a writing workshop and process-writing approach, where learners gradually plan, draft, revise, illustrate, publish, and respond to authentic texts. The recurring project, "Our Everyday: A Small Class Blog," invites learners to collaboratively create a collection of illustrated blog entries that document aspects of daily life while strengthening writing, reading, and communication skills through authentic interaction with classmates.

Throughout the project, learners move through the writing process by selecting meaningful topics, organizing events using simple chronological structures and connectors, creating visual supports, and revising their work with peer and teacher feedback before publication. Reading classmates' entries and writing short responses encourages authentic communication, develops audience awareness, and promotes collaborative learning within a supportive writing community.

Collaborative work is organized through rotating roles that allow every learner to participate in different stages of the publishing process. Learners alternate responsibilities such as drafting the written entry, selecting or creating visual elements and captions, improving cohesion through time expressions and connectors, reading and responding to classmates' posts, and organizing the classroom blog or portfolio. By rotating responsibilities throughout the project, all learners experience the different processes involved in planning, producing, sharing, and reflecting on written communication.

Through this project, English becomes a meaningful means for documenting everyday life, communicating personal experiences, and participating in an authentic community of readers and writers, while fostering creativity, collaboration, reflection, and confidence in written communication.

Interdisciplinary Connections

This competency connects English learning with Language and Literature, Social Studies, Natural Sciences, Mathematics, Cultural and Artistic Education, and socio-emotional development through the exploration and documentation of everyday experiences. By reading, writing, illustrating, and responding to short blog entries, learners use English to communicate personal experiences, reflect on daily life, and engage in authentic written interactions with classmates.

Language and Literature supports learners in planning, writing, and revising short illustrated texts with a clear structure, including an opening, development, and closing. Learners also strengthen reading comprehension by responding thoughtfully to classmates' blog entries, developing purposeful written communication and audience awareness.

Social Studies enables learners to describe the places where they live and to recognize how family, work, traditions, and community activities shape everyday life. Through sharing personal experiences, learners appreciate the diversity of daily routines and the social relationships that characterize different communities.

Natural Sciences is integrated as learners describe elements of the natural world that appear in their daily experiences, including plants, animals, weather, materials, and local environments. These observations encourage learners to connect personal experiences with responsible interactions with their surroundings.

Mathematics contributes through the organization of events in chronological order, the use of time expressions, simple timelines, counting routines, and the identification of patterns across daily activities. Learners also interpret and communicate basic quantitative information related to their everyday experiences.

Cultural and Artistic Education enriches the competency through the creation and selection of photographs, drawings, captions, and other visual elements that accompany written texts. Learners explore how images and words work together to communicate meaning while developing creativity and visual communication skills.

Socio-emotional development is strengthened as learners reflect on personal experiences, express thoughts and feelings respectfully, and provide supportive written responses to classmates' work. Through authentic exchanges, learners develop empathy, appreciation for different perspectives, and confidence in sharing their own voices.

Through these interdisciplinary connections, English becomes a meaningful tool for documenting everyday life, communicating personal experiences, and building a collaborative community of readers and writers that values reflection, creativity, and respectful interaction.

PROGRAM PILOTO

Specific competency	Assessment indicators
SC.EFL3.14. Developing literary understanding through written responses to short texts, expressing what was surprising, meaningful, or memorable, and valuing multiple interpretations of literature. CC, CAEC, CSE.	**I.EFL.3.14.1.** Writes a short opinion in English about a literary work read, stating in at least two sentences what surprised them and what stayed with them. **I.EFL.3.14.2.** Supports the opinion with at least one brief reason drawn directly from the text or from personal experience, using an opinion phrase (I think..., In my opinion..., because...). **I.EFL.3.14.3.** Reads a classmate's opinion about the same work and, in one sentence, names a similarity or difference between the two readings, showing that different readers can understand the same text in different ways.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.3.d.4. Familiarity with common everyday English text types, including short narratives, announcements, blog posts, illustrated messages, infographics, invitations, guides, and basic agreements used in school and community contexts. **EFL.3.4.d.17.** Comparatives and superlatives: regular and common irregular forms (bigger, more important, the tallest, the most common) used to compare places, objects, people, and practices. **EFL.3.4.d.25.** Digital texts (blog entries, illustrated posts): short written texts with images, headings, and hyperlinks that share everyday experiences, opinions, or recommendations for a school or community audience.	**EFL.3.1.p.4.** Recognizes emotions, intentions, and purposes in short dialogues, narratives, and theatrical reenactments. **EFL.3.2.p.14.** Expresses a simple opinion about a text, a practice, or a recommendation, giving one brief reason. **EFL.3.3.p.21.** Locates explicit information and begin to infer simple implied information in short texts used in the classroom. **EFL.3.4.p.25.** Writes short written opinions about literary works read, stating what surprised the reader and what stayed in mind. **EFL.3.3.p.40.** Uses illustrated dictionaries and simple digital tools with teacher support to expand vocabulary.	**EFL.3.1.a.7.** Listens attentively to the stories, opinions, and recommendations of classmates, family members, and community members, in English and in the languages of the place.

PROGRAMA PILOTO

Methodological Guidelines

To develop this competency, learning begins with learners' encounters with diverse literary works that can be read, discussed, and revisited over time. Through short stories, poems, songs, chants, and other literary texts from different cultures—including works from their own communities—learners discover that literature expresses experiences, traditions, emotions, and ways of understanding the world. English becomes a means for reading, appreciating, and sharing personal responses to literary works while recognizing the value of both written and oral traditions.

The teacher creates opportunities for learners to read literary texts collaboratively, discuss their ideas, and reflect on the meanings, emotions, and memories each text evokes. Learners are encouraged to support their opinions with evidence from the text or connections to their own experiences, while respecting that different readers may interpret the same work in different ways. Throughout the process, literature is approached as a shared space for dialogue, reflection, and intercultural understanding.

The methodology that best supports this competency is Project-Based Learning (PBL), enriched through a dialogic literary inquiry approach, where collaborative reading and discussion guide learners toward the construction of personal interpretations. The recurring project, "What Stayed With Us: A Small Book of Written Opinions on What We Read," invites learners to read literary works from diverse cultural traditions, exchange ideas with classmates, and produce short written opinions that explain what surprised them, what remained in their minds, and why.

Throughout the project, learners participate in shared reading, collaborative discussion, reflective writing, and peer comparison of literary responses. They learn to express opinions using appropriate language structures, justify their ideas with examples from the text or personal experiences, and compare different interpretations respectfully. Reading classmates' responses further strengthens critical thinking by helping learners recognize similarities and differences in the ways literature can be understood.

Collaborative work is organized through rotating roles that encourage every learner to engage with different aspects of literary inquiry. Learners alternate responsibilities such as leading the reading of the text, identifying memorable or surprising elements, explaining reasons that support the group's opinion, documenting shared reflections, and comparing their interpretations with those of other teams. By rotating these responsibilities throughout the project, all learners experience the different processes involved in reading, interpreting, discussing, and responding to literary texts.

Through this project, English becomes a meaningful tool for engaging with literature, expressing personal interpretations, appreciating diverse cultural voices, and participating in thoughtful dialogue that fosters critical thinking, empathy, and intercultural awareness.

PROGRAMA PILOTO

Interdisciplinary Connections

This competency connects English learning with Language and Literature, Cultural and Artistic Education, Social Studies, Music, Natural Sciences, and socio-emotional development through the reading, discussion, and interpretation of diverse literary works. By exploring stories, poems, songs, chants, and other literary texts from different cultures and their own communities, learners use English to express personal opinions, justify their interpretations, and appreciate literature as a source of cultural knowledge and human experience.

Language and Literature provides opportunities for learners to read and interpret short literary works, express personal opinions about what surprised them or remained in their minds, support their ideas with evidence from the text or personal experiences, and compare their interpretations with those of their classmates. These activities strengthen literary appreciation, reading comprehension, and respectful dialogue around literature.

Cultural and Artistic Education enriches the competency through the observation and appreciation of the artistic elements present in literary works, including words, images, rhythm, and visual representations. Learners explore how different artistic forms communicate meaning while creating simple visual responses that complement their interpretations.

Social Studies enables learners to recognize the cultural and geographic origins of literary works by locating the communities where they were created and exploring the traditions they represent. Through these connections, learners develop respect for cultural diversity and gain a broader understanding of how literature reflects the histories, identities, and everyday lives of different peoples.

Music contributes through the exploration of rhythm, melody, repetition, and oral traditions found in songs, chants, and lyrical texts. Learners experience how musical elements support meaning and emotional expression while recognizing the close relationship between language, literature, and music across cultures.

Natural Sciences is integrated as learners identify and discuss elements of the natural world represented in literary works, such as landscapes, weather, plants, animals, and seasonal changes. These observations encourage learners to connect literary texts with environmental awareness and appreciation of nature.

Socio-emotional development is strengthened as learners identify and express emotions evoked by literary works, recognize that different readers may have different interpretations, and engage respectfully with the opinions of others. Through collaborative literary discussions, learners develop empathy, emotional awareness, and confidence in expressing personal perspectives.

Through these interdisciplinary connections, English becomes a means to appreciate literature, explore cultural diversity, express thoughtful personal responses, and engage in meaningful dialogue that fosters creativity, critical thinking, intercultural understanding, and respect for multiple perspectives.

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.15. Rewriting traditional stories from local and global contexts into new settings through short, illustrated texts in English, exploring how stories change over time, across places, and through different perspectives. CC, CAEC, CCCC.	**I.EFL.3.15.1.** Rewrites a traditional story from the place or the world by setting it in a different time, place, or body, producing a short, illustrated text in English. **I.EFL.3.15.2.** Maintains the original story's main elements — characters, conflict, and resolution — while coherently changing the setting, using basic connectors and simple past tense. **I.EFL.3.15.3.** Explains in one or two sentences why the original story matters and what the rewrite adds, demonstrating awareness of rewriting as a dialogue with the community that transmitted the story.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.3.d.24. Short literary texts (rhymes, short stories, riddles): creative, playful texts from communities that learn or use English in different places, including illustrated stories and riddles that invite language play. **EFL.3.3.d.29.** Intercultural reading with mediation between languages: strategies for reading English texts with support from community languages and visual elements, and for translating meaning between English and the languages of the place. **EFL.3.3.d.33.** Cultural productions from the community and other places: stories, songs, dances, visual arts, films, and crafts made by communities in Ecuador and in other regions as examples of diverse aesthetic and expressive traditions.	**EFL.3.3.p.16.** Reads illustrated stories, rhymes, and poems from communities that learn or use English in different places, identifying main ideas and key images. **EFL.3.3.p.17.** Reads short chronicles and testimonies to identify what has changed, what remains, and what can be learned from different memories of the past. **EFL.3.3.p.22.** Recognizes the basic structure of narrative and informational texts: opening, development, and closing. **EFL.3.4.p.26.** Rewrites traditional stories of the place and the world, setting them in another time, place, or body, in short, illustrated texts.	**EFL.3.2.a.4.** Values the languages of Ecuador and the local community as part of the classroom's shared repertoire. **EFL.3.3.a.16.** Values the living memory of the place and the country as knowledge that is transmitted and cared for across generations.

PROGRAMA PILOTO

Methodological Guidelines

To develop this competency, learning begins with the exploration of traditional stories from diverse cultures and communities. Through a carefully selected collection of short illustrated tales, learners discover that storytelling is a shared human tradition through which communities preserve knowledge, values, beliefs, and imagination across generations. Alongside stories from different parts of the world, learners are encouraged to bring stories from their own families and communities, recognizing that every culture contributes valuable voices to the classroom. English becomes a bridge for sharing, comparing, and celebrating these traditions while respecting the identity and origins of each story.

The teacher creates opportunities for learners to read, listen to, discuss, and compare traditional stories before retelling them creatively in new settings or contexts. Learners understand that retelling does not replace or modify the original tradition but continues the long practice of storytelling by presenting familiar narratives through new perspectives. Throughout the process, they identify characters, settings, events, and messages while reflecting on the values and ideas that stories communicate across cultures and generations.

The methodology that best supports this competency is Project-Based Learning (PBL), enriched through a storytelling and creative retelling approach, where reading, oral interaction, creative writing, and visual representation are integrated into an authentic collaborative project. The recurring project, “Stories That Traveled, Stories We Retold,” invites learners to reinterpret traditional stories respectfully, creating illustrated retellings that demonstrate comprehension while encouraging creativity, intercultural understanding, and personal expression.

Throughout the project, learners collaboratively select stories, explore their cultural origins, discuss their central themes and values, plan a respectful retelling, draft and revise short narratives, and illustrate their final versions. Whenever available, digital resources such as audio recordings, videos, or creative applications may enrich learners’ exploration of storytelling traditions; however, printed materials, drawings, and oral storytelling remain equally valuable alternatives, ensuring that meaningful participation is possible in every educational context.

Collaborative work is organized through rotating roles that allow every learner to contribute to different stages of the creative process. Learners alternate responsibilities such as reading and introducing the original story, identifying key narrative elements, planning the new setting or perspective, drafting and revising the retelling, designing illustrations, and preparing the final classroom book. By rotating these responsibilities throughout the project, all learners experience the different processes involved in interpreting, creating, illustrating, and sharing stories.

Through this project, English becomes a meaningful means for preserving, sharing, and creatively reinterpreting traditional stories while fostering imagination, intercultural awareness, collaboration, and appreciation for the rich storytelling traditions that connect communities across the world.

PROGRAMA PILOTO

Interdisciplinary Connections

This competency connects English learning with Language and Literature, Social Studies, Cultural and Artistic Education, Natural Sciences, and socio-emotional development through the reading, retelling, illustration, and discussion of traditional stories from diverse cultures and communities. By engaging with stories that have traveled across generations and places, learners use English to explore narrative structure, appreciate cultural heritage, express creativity, and recognize storytelling as a shared human practice that connects people across languages and traditions.

Language and Literature provides opportunities for learners to explore the structure of traditional narratives by identifying their opening situation, conflict, and resolution before creating their own respectful retellings in English. Through reading, planning, rewriting, and illustrating stories, learners strengthen narrative writing, reading comprehension, creative expression, and their understanding of retelling as a legitimate form of authorship that honors rather than replaces the original story.

Social Studies enriches the competency as learners locate the places where stories originate, recognize how oral traditions travel across territories and generations, and explore the relationships between culture, migration, identity, and community memory. These experiences help learners appreciate the diversity of cultural traditions while understanding storytelling as part of humanity's shared heritage.

Cultural and Artistic Education contributes through the creation of illustrations, visual story maps, and the collaborative design of the class book that accompanies each retelling. Learners also value storytelling as a living cultural expression by welcoming family members, elders, storytellers, or community knowledge keepers who share traditional narratives, strengthening respect for both tangible and intangible cultural heritage.

Natural Sciences is integrated as learners observe and discuss the animals, plants, landscapes, weather, and natural phenomena that appear in traditional stories. Comparing these elements with those found in their own environments encourages careful observation of the natural world while helping learners recognize how different communities interpret and relate to nature through storytelling.

Socio-emotional development is strengthened as learners listen respectfully to stories from different cultures, collaborate in creating shared retellings, acknowledge the communities and people from whom stories come, and reflect on the values conveyed through traditional narratives. These experiences foster empathy, respect for cultural diversity, responsible participation in collaborative work, and appreciation for multiple perspectives and identities.

Through these interdisciplinary connections, English becomes a means to preserve and reinterpret cultural heritage, develop creativity through storytelling, strengthen intercultural understanding, and recognize that stories carry knowledge, values, and memories that continue to connect communities across generations and around the world.

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.16. Creating and solving riddles about everyday objects and activities through short texts, exploring language play, and recognizing riddles as a form of cultural knowledge. CC, CAEC, CCCC.	**I.EFL.3.16.1.** Solves at least two short riddles in English, identifying key clues and briefly explaining, in English or in the local language, the reasoning used to reach the answer. **I.EFL.3.16.2.** Composes at least one short original riddle about an object or everyday activity, including three or more clues in English and in the local language so a classmate can solve it. **I.EFL.3.16.3.** Names the riddle as a form of playful knowledge passed down in communities and gives one example of a riddle known from family or community tradition.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.2.d.3. Understanding that English is part of a shared multilingual repertoire used in the classroom and school to support communication, learning, and participation. **EFL.3.3.d.24.** Short literary texts (rhymes, short stories, riddles): creative, playful texts from communities that learn or use English in different places, including illustrated stories and riddles that invite language play. **EFL.3.4.d.32.** Shared practices of the community passed down across generations: games, celebrations, food preparation, crafts, songs, and ways of caring that are transmitted within families and communities and recognized as living knowledge.	**EFL.3.2.p.8.** Recites and dramatize rhymes, riddles, short literary passages, and dialogues with appropriate intonation and expression. **EFL.3.3.p.20.** Solves short riddles by identifying clues and keywords, and briefly explain the reasoning behind your answers. **EFL.3.4.p.27.**Composes short, original riddles about everyday objects and activities, using clues and wordplay, in English. **EFL.3.4.p.36.** Uses words from other languages known within English sentences as cultural bridges, and name objects, practices, and places in both English and the community language. **EFL.3.3.p.42.** Notices similarities and differences between English and the languages known to support comprehension and production.	**EFL.3.2.a.6.** Recognizes the languages of the place as a bridge for understanding English and for making oneself understood

PROGRAMA PILOTO

Methodological Guidelines

To develop this competency, the learning situation introduces learners to a small collection of playful language texts in English, including riddles, riddle-poems, rebus puzzles, acrostics, missing-letter puzzles, and other short language games based on familiar objects, animals, foods, places, and everyday experiences. The collection intentionally brings together playful traditions from different cultures, alongside riddles from the learners' own communities, allowing English to become a language for curiosity, creativity, and cultural exchange.

A key principle of this competency is that riddles are not assessments but opportunities to think, imagine, and enjoy language. Learners move through three complementary practices: solving riddles by identifying clues and explaining their reasoning; recognizing riddles as part of oral and written cultural traditions shared across families and communities; and creating their own short riddles using simple descriptive language in English while incorporating words or expressions from the local linguistic context whenever appropriate.

The methodology that best supports this competency is Project-Based Learning (PBL) enriched through a language-play and inquiry-based approach, organized around the recurring product "What Is It? – ¿Qué será, qué será?: A Classroom Collection of Riddles." Working collaboratively, each team reads and solves different types of riddles, discusses the clues that reveal the answer, and creates an original illustrated riddle with at least three clues in English and one clue connected to the language or culture of the community. The completed collection may be presented as a classroom booklet or a wall display where classmates solve one another's riddles.

Teams work through rotating roles that distribute responsibility across the project: riddle reader (reads the puzzle aloud and identifies its clues), clue finder (explains the reasoning behind the solution), riddle creator (writes the team's original puzzle), illustration keeper (prepares the drawing or visual support while keeping the answer hidden), and collection keeper (organizes the team's contribution within the class booklet or display). Roles rotate throughout the learning process so every learner experiences different ways of participating in playful language creation and interpretation.

Interdisciplinary Connections

This competency connects English learning with Language and Literature, Social Studies, Cultural and Artistic Education, Natural Sciences, and socio-emotional development through the exploration, creation, and sharing of playful language texts such as riddles, word games, and short descriptive puzzles. By solving and creating language games from different cultural traditions and their own communities, learners use English to develop creativity, interpret meaning, appreciate linguistic diversity, and recognize language as a form of cultural expression.

Language and Literature provides opportunities for learners to explore short descriptive and poetic forms, identify clues and patterns in texts, explain their interpretations, and create original riddles using simple language structures. Through wordplay, description, and creative writing, learners strengthen reading comprehension, vocabulary development, and their ability to use language for imaginative expression.

Social Studies enriches the competency as learners explore where riddles and language games come from, locate their cultural origins, and recognize how these forms of playful knowledge travel through families and communities. These connections help learners appreciate linguistic traditions as part of cultural identity and understand how everyday forms of expression preserve shared knowledge.

Cultural and Artistic Education contributes through the creation of illustrations, rebus images, visual clues, and the collaborative design of the classroom riddle collection. Learners explore how images and words work together to communicate meaning while developing creativity and appreciation for different ways of representing ideas.

Natural Sciences is integrated as learners create and interpret riddles connected to familiar elements of the natural world, such as animals, plants, weather, landscapes, and everyday objects. These activities encourage careful observation, description, and curiosity about the environment that surrounds them.

Socio-emotional development is strengthened as learners collaborate during problem solving, share their ideas respectfully, and recognize that different learners may approach the same puzzle in different ways. Through playful language activities, learners develop patience, confidence, empathy, and appreciation for the contributions of their classmates.

Through these interdisciplinary connections, English becomes a means to explore creativity, appreciate cultural and linguistic diversity, develop flexible thinking, and engage in meaningful communication through the joy of playing with language.

Declarative	**Procedural**	**Attitudinal**
EFL.3.1.d.5. Knowledge of basic spoken and written English conventions, including capitalization, end punctuation (period, question mark, exclamation mark), basic comma use, common spelling patterns of high-frequency words, and basic pronunciation features such as short and long vowel sounds, word stress, and simple intonation patterns. **EFL.3.2.d.6.** Vocabulary for expanded daily routines and free-time activities: household chores, school schedules, hobbies, sports, and leisure at home and in the community. **EFL.3.2.d.11.** Vocabulary for health and the body: body parts, common health conditions, hygiene habits, food, rest, movement, and basic medical care. **EFL.3.4.d.15.** Simple past for narration: regular and high-frequency irregular verbs (was/were, went, had, said, made, came), affirmative, negative, and question forms used to recount events and experiences. **EFL.3.4.d.18.** Modals can, could, should, and must for ability, possibility, advice, and obligation: receptive and guided productive use in everyday transactions, guides, infographics, and agreements. **EFL.3.4.d.23.** Informational texts (guides, infographics, questionnaires): short factual texts that explain, instruct, or present data using numbered steps, headings, icons, and visual cues. **EFL.3.4.d.30.** Collaborative written production: stages and strategies for drafting, revising, and sharing texts in pairs and small groups — planning with notes, writing a first version, giving and receiving short feedback, and presenting a final product.	**EFL.3.2.p.5.** Narrates daily activities, games, and routines using connected sentences with basic sequence connectors and simple past or present tense forms. **EFL.3.1.p.28.** Designs short, illustrated guides and posters on body care, hygiene, rest, food, and movement using imperative forms and short descriptive sentences. **EFL.3.2.p.43.** Describes body care practices and healthy routines in short oral or written presentations.	**EFL.3.2.a.3.** Is willing to speak, read, and write in English throughout the school year, treating errors as a natural part of learning. **EFL.3.4.a.12.** Cares for one's own body and respects classmates' bodies in all learning activities. **EFL.3.4.a.13.** Recognizes the people in the family and the community who sustain the care of the body and well-being. **EFL.3.4.a.14.** Values knowledge about the body, food, rest, and movement as shared learning that belongs to the whole community.

PROGRAM PILOTO

Methodological Guidelines

To develop this competency, the learning situation invites learners to explore everyday practices that support personal care and well-being through the creation of short illustrated guides in English. The class reflects on the question how do we take care of our bodies every day, and who helps us? and transforms their ideas into simple guides that explain concrete healthy habits such as handwashing, drinking water, balanced eating, physical activity, rest, dental care, and body posture. Each team contributes one guide that becomes part of a shared classroom collection for families and other learners.

A key focus of this competency is the development of writing as a process. Learners plan, draft, read, and revise short instructional texts, recognizing how language changes when it is meant to guide another person's actions. Through the creation of these guides, learners explore the purpose of imperative structures, negative instructions, polite expressions, time markers, and quantity expressions as tools for clear communication rather than isolated grammar rules.

The methodology that best supports this competency is Project-Based Learning (PBL), organized around the recurring product "Short Guides for Our Days: A Classroom Collection of Healthy Habits." Working collaboratively, each team selects one daily care practice, gathers relevant information from school and family contexts, writes short instructions in English, and designs an illustrated guide that combines words and visual supports. The project encourages learners to recognize both institutional health recommendations and the knowledge of their own communities as part of a respectful intercultural dialogue.

Teams work through rotating roles connected to the writing process: practice researcher (identifies the habit and the steps involved), draft writer (composes the instructions in English), illustrator-designer (organizes images, icons, and layout), peer editor (checks whether the guide is clear and actionable for another reader), and community-link (collects a family perspective about care practices). Roles rotate so every learner participates in different stages of creating and improving a written text.

Interdisciplinary Connections

This competency connects English learning with Natural Sciences, Physical Education, Language and Literature, Social Studies, Cultural and Artistic Education, and socio-emotional development through the creation of short instructional texts about personal care and healthy habits. By researching, writing, revising, and sharing illustrated guides in English, learners use language to communicate practical information, connect school knowledge with everyday experiences, and recognize the importance of caring for themselves and others within their communities.

Natural Sciences provides opportunities for learners to explore the relationship between daily habits and well-being by identifying practices related to hygiene, nutrition, hydration, rest, and body care. Through the creation of health guides, learners connect scientific knowledge about the human body and healthy routines with clear communication intended for real audiences.

Physical Education contributes as learners reflect on the role of movement, posture, breathing, and rest in maintaining a healthy lifestyle. The language developed in the guides allows learners to describe simple physical practices and connect classroom writing with experiences of body awareness and active living.

Language and Literature strengthens the competency through the planning, drafting, reviewing, and rewriting of short instructional texts. Learners explore how instructions, signs, and informative texts are organized, paying attention to clarity, sequence, and the use of language structures that help readers understand and follow written messages.

Social Studies enriches the competency as learners recognize the people and relationships that contribute to individual and community care, including family members, school staff, and other community members. These connections help learners understand care practices as part of social life and shared responsibility.

Cultural and Artistic Education supports the creation of the guides through the use of illustrations, icons, layout, and visual organization. Learners explore how images and words work together to communicate information effectively and develop simple visual compositions for meaningful purposes.

Socio-emotional development is strengthened as learners reflect on caring for themselves and others, collaborate respectfully during the writing process, and recognize the responsibility involved in sharing information about well-being. Through this work, learners develop empathy, responsibility, and awareness of the limits and purposes of written communication.

Through these interdisciplinary connections, English becomes a tool for communicating meaningful information, linking classroom learning with everyday life, promoting healthy practices, and developing learners' ability to participate responsibly in their families, schools, and communities.

PROGRAM IN PILOTO

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.18. Recommending cultural productions from the community and around the world through short, illustrated posts that describe and share opinions on meaningful works while respecting diverse tastes and perspectives. CC, CMCT.	I.**EFL.3.18.1.** Writes a short, illustrated post in English recommending a cultural production — a song, a story, a dance, a craft, or a film — from the community or another place in the world. **I.EFL.3.18.2.** Describes the production and explains, in at least two sentences, why it is memorable or meaningful, using opinion language and simple connectors. **I.EFL.3.18.3.** Reads or listens to a classmate's recommendation and responds with one sentence that shows respect for the classmate's choice, even if tastes differ.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.2.d.8. Vocabulary for transport and travel: means of transport, directions, distances, journeys, and experiences of moving between places. **EFL.3.4.d.13.** Vocabulary for food preparation and community practices: ingredients, cooking actions, names of shared dishes, and practices of preparing and sharing food. **EFL.3.4.d.25.** Digital texts (blog entries, illustrated posts): short written texts with images, headings, and hyperlinks that share everyday experiences, opinions, or recommendations for a school or community audience. **EFL.3.4.d.31.** Presentation of information with visual support: strategies for combining spoken or written text with images, diagrams, and graphic organizers to share findings, recommendations, or project results with a familiar audience. **EFL.3.3.d.33.** Cultural productions from the community and other places: stories, songs, dances, visual arts, films, and crafts made by communities in Ecuador and in other regions as examples of diverse aesthetic and expressive traditions. **EFL.3.3.d.34.** Historical memories and testimonies: chronicles, oral accounts, photographs, objects, and timelines that record important moments from the community, the country, and the world from the perspective of different voices. **EFL.3.3.d.36.** Everyday life in English-speaking communities: routines, foods, games, school life, celebrations, and ways of life that show the diversity of English-speaking communities worldwide.	**EFL.3.2.p.15.** Expresses respectful agreement and disagreement and suggest alternatives in short classroom discussions. **EFL.3.3.p.18.** Reads short accounts of journeys and experiences in communities different from one's own to broaden one's knowledge of the world. **EFL.3.3.p.19.** Reads illustrated blog entries to recognize aspects of the writer's daily life and connect them to one's own experience. **EFL.3.4.p.25.** Writes short written opinions about literary works read, stating what surprised the reader and what stayed in mind. **EFL.3.3.p.29.** Writes short, illustrated posts recommending cultural productions from the community or around the world, providing brief reasons for each recommendation.	**EFL.3.2.a.2.** Accepts English as one of many languages, equally valid for understanding the world and meeting new people. **EFL.3.1.a.7.** Listens attentively to the stories, opinions, and recommendations of classmates, family members, and community members, in English and in the languages of the place. **EFL.3.2.a.10.** Treats with respect those who think or feel differently and takes others' reasons into account. **EFL.3.3.a.17.** Appreciates the artistic forms of the place and the world, recognizing the diversity of aesthetic expressions.

PROGRAM PROTO

Methodological Guidelines

To develop this competency, the learning situation invites learners to explore cultural productions as expressions of community knowledge, creativity, and identity. Through the creation of short illustrated recommendation posts titled “Made by Hands, Worth a Look,” teams investigate handmade objects and material practices from their own communities and from other parts of the world, describing what each object is, who made it, what materials and techniques shaped it, and why it is meaningful for others to know about it.

The class explores cultural productions by considering both the final object and the processes behind it. Learners reflect on questions such as: What does this object do? Who created it? What materials and gestures are involved? What story or value does it carry? This approach helps learners recognize cultural productions as living expressions of community knowledge rather than as isolated objects, connecting materials, makers, traditions, and meanings.

The methodology that best fits this competency is Project-Based Learning (PBL), organized around a classroom folder of recommendation posts. Teams work collaboratively to select a cultural production, gather information about its materials and making process, identify its cultural meaning, and write a short recommendation in English using descriptions, opinions, reasons, and comparisons. Learners explore models such as museum labels, craft catalogs, and cultural descriptions to recognize how these texts communicate information to an audience.

Through rotating roles, learners develop their ability to describe, explain, and appreciate cultural productions while giving respectful feedback to their classmates. The final collection becomes a shared classroom resource that celebrates the knowledge, creativity, and traditions represented through handmade creations.

Interdisciplinary Connections

This competency connects English learning with Cultural and Artistic Education, Social Studies, Language and Literature, Mathematics, and Natural Sciences through the exploration, description, and appreciation of cultural productions from different communities. By creating recommendation texts about handmade objects and traditional practices, learners use English to describe materials, processes, makers, and meanings while developing respect for cultural knowledge and diverse ways of creating.

Language and Literature supports learners in developing short recommendation texts with a clear purpose and audience. Through the analysis of museum labels, craft descriptions, and cultural texts, learners identify how information is organized, express opinions, provide reasons, and use descriptive language to communicate why a cultural production is meaningful.

Cultural and Artistic Education enriches the competency through the observation and appreciation of artistic expressions such as textiles, ceramics, carvings, beadwork, and embroidery. Learners explore how materials, techniques, colors, patterns, and creative processes reflect the identity and knowledge of communities while developing their own ways of representing cultural productions.

Social Studies enables learners to understand the geographic, historical, and social contexts of cultural productions. By identifying the places, makers, and community histories connected to each object, learners recognize how traditions are preserved, shared, and transformed across generations and cultures.

Mathematics contributes through the observation of patterns, symmetry, shapes, proportions, and structures present in handmade productions. Learners identify mathematical elements in woven designs, embroidered patterns, and crafted objects, connecting artistic creation with spatial reasoning and geometry.

Natural Sciences is integrated through the exploration of the materials involved in cultural productions, including fibers, clay, wood, plant dyes, and other natural resources. Learners reflect on how communities use and transform elements from their environments while considering the importance of responsible relationships with nature.

Through these interdisciplinary connections, English becomes a means to explore cultural heritage, communicate appreciation for human creativity, understand the relationship between communities and their environments, and engage respectfully with diverse traditions through language, observation, and meaningful dialogue.

PROGRAM PILOTO

Specific competency	Assessment indicators
SC.EFL3.19. Conducting simple scientific inquiry into local topics through English-language questionnaires by asking questions, collecting information, and sharing findings, valuing different ways of understanding the world. CC, CMCT, CCCC.	**I.EFL.3.19.1.** Writes a short questionnaire in English and in the community's languages, with at least four questions (Wh- and yes/no) on a topic related to the place—the natural world, the body, water, food, or air. **I.EFL.3.19.2.** Collects information through at least one of the following: observation, a short interview, or a short reading, and then organizes the findings into a simple chart, list, or short note in English. **I.EFL.3.19.3.** Share the findings with classmates, families, or community members in a short presentation (oral or written), naming the source of the information and at least one thing still to be discovered.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.4.d.9. Vocabulary for weather, seasons, and the natural environment: climate, landscapes, ecosystems, plants, and animals of the place and other regions. **EFL.3.2.d.11.** Vocabulary for health and the body: body parts, common health conditions, hygiene habits, food, rest, movement, and basic medical care. **EFL.3.4.d.21.** Question forms including how often, how long, and how much/many: Wh- questions, yes/no questions, and basic indirect question structures (Can you tell me...?) used in interviews, inquiries, and conversations. **EFL.3.4.d.23.** Informational texts (guides, infographics, questionnaires): short factual texts that explain, instruct, or present data using numbered steps, headings, icons, and visual cues. **EFL.3.4.d.35.** The natural world of the place and other regions: ecosystems, landscapes, animals, and plants of Ecuador and the Americas, and the practices communities use to care for and live with the natural world.	**EFL.3.2.p.9.** Shares orally what has been learned from an inquiry, a reading, or an interview, using short and clear statements. **EFL.3.2.p.12.** Conducts short interviews with family members, neighbors, and classmates by formulating Wh- and yes/no questions and recording their answers. **EFL.3.3.p.21.** Locates explicit information and begin to infer simple implied information in short texts used in the classroom. **EFL.3.4.p.30.** Drafts short questionnaires in English and the community's languages for scientific inquiries about local topics. **EFL.3.1.p.37.** Summarizes, orally or in writing, the information read or heard in another language in English in the classroom. **EFL.3.4.p.44.** Inquires and records information about the natural world of the place and other regions through guided questions and simple note-taking.	**EFL.3.1.a.8.** Respects turn-taking and the time of whoever is speaking in exchanges, interviews, and class discussions. **EFL.3.4.a.13.** Recognizes the people in the family and the community who sustain the care of the body and well-being. **EFL.3.4.a.19.** Cares for living beings and places mentioned in classroom activities, demonstrating responsibility toward the natural world.

PROGRAMA PILOTO

Methodological Guidelines

To develop this competency, the learning situation invites learners to understand science as a way of observing, questioning, and exploring the world around them. Through the project "What I want to know about my place," children begin with questions from their own everyday environments and recognize that scientific inquiry can emerge from ordinary experiences in their homes, neighborhoods, and school.

The class explores different ways of doing science beyond traditional experiments, including observation, description, comparison, interviews, measurement, and the careful reading of sources. Each team chooses a question connected to its surroundings and develops a small inquiry process to investigate possible explanations, collect information, and communicate findings. This approach helps learners see their everyday environment as a meaningful space for scientific exploration.

The methodology that best fits this competency is Inquiry-Based Learning (IBL), organized around collaborative inquiry teams. Learners develop an inquiry notebook where they record observations, questions, measurements, and sources of information, while using English to formulate questions, describe observations, express uncertainty, and share findings. The final product may take different forms, such as a poster, leaflet, or short oral presentation, allowing teams to communicate what they discovered in a clear and meaningful way.

Through this process, learners develop curiosity, critical thinking, and confidence in using English as a tool for investigating, organizing, and communicating knowledge about the world around them.

Interdisciplinary Connections

This competency connects English learning with Natural Sciences, Language and Literature, Mathematics, Social Studies, Cultural and Artistic Education, and socio-emotional development through inquiry-based exploration of learners' everyday environments. By formulating questions, collecting information, observing changes, and communicating findings, learners use English as a tool to investigate their surroundings and recognize that scientific knowledge can emerge from everyday experiences and community knowledge.

Natural Sciences provides the central context for this competency, as learners observe, describe, compare, and investigate elements of the natural and built environment. Through simple measurements, observations, interviews, and the identification of sources, learners develop scientific inquiry skills while recognizing that science begins with curiosity and careful attention to the world around them.

Language and Literature supports the development of the competency through the formulation of questions, the organization of observations, and the creation of short inquiry reports. Learners practice communicating ideas clearly, describing evidence, and distinguishing between information gathered from sources and personal interpretations.

Mathematics contributes through the use of counting, measurement, comparison, and simple data representation. Learners organize observations such as quantities, changes over time, or patterns in their environment, strengthening their ability to interpret information and communicate findings.

Social Studies is integrated through the exploration of local environments and community knowledge. Interviews with family members, neighbors, and people with practical experience help learners recognize that knowledge is also built through communities and that different people contribute valuable perspectives about the places where they live.

Cultural and Artistic Education enriches the competency through the creation of visual representations of findings, including drawings, diagrams, posters, and other ways of communicating scientific observations. Learners use images and design to make their discoveries understandable and meaningful for others.

Socio-emotional development is strengthened as learners cultivate curiosity, patience, collaboration, and respect for different ways of knowing. By listening to classmates' questions, valuing community experiences, and recognizing that some answers require further investigation, learners develop confidence and openness toward learning.

Through these interdisciplinary connections, English becomes a means to ask meaningful questions, explore the world, value different sources of knowledge, and communicate discoveries with curiosity, responsibility, and respect.

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.20. Developing artistic understanding through presentations supported by images and short texts that describe artistic expressions from local and global contexts, and recognize the diversity of aesthetic forms. CC, CD, CAEC.	**I.EFL.3.20.1.** Prepares a visual aid — an illustrated slide, panel, or poster — with at least three short English labels or sentences for an oral presentation about an art form from the place or the world. **I.EFL.3.20.2.** Combines spoken or written text with images in the presentation, describing the artistic production in at least two simple sentences so the images and words work together. **I.EFL.3.20.3.** Names at least two distinct art forms from different communities and states and, in one sentence, explains what makes each distinctive, demonstrating awareness of the diversity of aesthetic forms.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.4.d.17. Comparatives and superlatives: regular and common irregular forms (bigger, more important, the tallest, the most common) used to compare places, objects, people, and practices. **EFL.3.4.d.20.** Sentence connectors of sequence, contrast, and cause: first, then, after, before, finally (sequence); however, although (contrast); because, so (cause/result), used in narratives and explanations. **EFL.3.3.d.36.** Everyday life in English-speaking communities: routines, foods, games, school life, celebrations, and ways of life that show the diversity of English-speaking communities worldwide.	**EFL.3.2.p.6.** Describes places, people, objects, and community practices using concrete details and simple comparisons. **EFL.3.2.p.9.** Shares orally what has been learned from an inquiry, a reading, or an interview, using short and clear statements. **EFL.3.4.p.31.** Prepares graphic supports — slides, panels, illustrated posters — with short English texts for oral presentations on the arts of the place and the world.	**EFL.3.2.a.2.** Accepts English as one of many languages, equally valid for understanding the world and meeting new people. **EFL.3.3.a.17.** Appreciates the artistic forms of the place and the world, recognizing the diversity of aesthetic expressions. **EFL.3.1.a.23.** Shares with confidence what is being learned, the questions that arise, and the discoveries made in classroom activities.

PROGRAMA PILOTO

Methodological Guidelines

To develop this competency, the learning situation invites learners to explore art as a way of observing, interpreting, and expressing experiences about the world and themselves. Through the project "The many shapes of art in our place and in the world," children encounter diverse artistic forms from different communities and recognize that art can communicate emotions, ideas, memories, and perspectives beyond what words can express.

The class explores a wide repertoire of artistic expressions, including paintings, photographs, sculptures, masks, crafts, and other visual works. Learners identify how different artworks can represent different effects and meanings, such as the comic, the marvelous, the ordinary, the painful, the heroic, or the mysterious. They learn that appreciating art involves looking closely, asking questions, and understanding the relationship between images, materials, and human experiences.

The methodology that best fits this competency is Project-Based Learning (PBL), complemented by inquiry and cooperative learning. In teams, learners investigate a chosen artistic form, select representative images, and prepare an illustrated short presentation in English. Through rotating roles, they research the artwork, organize visual materials, write short sentences to accompany the images, and rehearse the oral presentation. The final product is an illustrated talk where learners use English to explain how an artwork communicates meaning and how it connects with their own interpretations.

Throughout the process, learners develop vocabulary related to artistic forms, materials, emotions, and visual characteristics while using English as a tool to describe, interpret, and share artistic experiences. The project encourages creativity, aesthetic appreciation, and confidence in expressing personal perspectives through the dialogue between images and words.

Interdisciplinary Connections

This competency connects English learning with Cultural and Artistic Education, Language and Literature, Social Studies, Natural Sciences, and Mathematics through the exploration, interpretation, and communication of artistic expressions from different communities. By observing artworks, describing their elements, and preparing short presentations in English, learners use language to appreciate creativity, understand cultural meanings, and express personal interpretations.

Cultural and Artistic Education provides the central context for this competency, as learners explore different artistic forms, materials, techniques, and ways of expressing ideas and emotions. Through the observation and creation of artistic pieces, learners develop aesthetic appreciation, creativity, and the ability to understand how artworks communicate experiences and perspectives.

Language and Literature supports the competency through the creation of short descriptions and oral presentations about artworks. Learners practice selecting words that complement rather than simply describe an image, organizing ideas clearly, and using English to express interpretations, feelings, and reflections about artistic works.

Social Studies contributes through the exploration of the cultural, historical, and community contexts of artistic productions. Learners identify where artworks come from, who creates them, and how artistic expressions reflect the identities, traditions, and experiences of different communities.

Natural Sciences is integrated through the observation of the materials used in artistic production, such as clay, wood, paper, ink, cloth, and stone. Learners recognize how different materials have particular characteristics and how artists transform natural resources into meaningful creations.

Mathematics connects through the organization and design of visual presentations, including the use of shapes, proportions, measurements, and spatial relationships when arranging images, labels, and original creations.

Through these interdisciplinary connections, English becomes a means to explore artistic diversity, communicate interpretations, appreciate cultural expressions, and develop creativity, observation, and respect for different ways of seeing and representing the world.

Through these interdisciplinary connections, English becomes a means to ask meaningful questions, explore the world, value different sources of knowledge, and communicate discoveries with curiosity, responsibility, and respect.

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.21. Expanding knowledge of community work and occupations through short reports describing local jobs and recognizing workers as holders of knowledge and experience. CC, CCCC, CIT.	**I.EFL.3.21.1.** Writes a short English report on a trade or occupation in the community — at least five sentences — that records at least one observation and one short quote or paraphrase from a community member who performs that work. **I.EFL.3.21.2.** Describes the tools, workspace, daily tasks, and people involved, using correct vocabulary and short, clear sentences. **I.EFL.3.21.3.** Refers to the workers as knowledgeable subjects, uses respectful language, and, in one sentence, explains why their work matters to the community.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.2.d.7. Vocabulary for community and neighborhood places: stores, markets, fairs, parks, clinics, libraries, transport stops, and services used in everyday life. **EFL.3.2.d.10.** Vocabulary for jobs, trades, and workplaces: names of occupations, tools, tasks, and work settings common to the community. **EFL.3.4.d.31.** Presentation of information with visual support: strategies for combining spoken or written text with images, diagrams, and graphic organizers to share findings, recommendations, or project results with a familiar audience.	**EFL.3.2.p.7.** Presents community practices, trades, and celebrations orally in English with visual support such as photographs, drawings, or objects. **EFL.3.2.p.12.** Conducts short interviews with family members, neighbors, and classmates by formulating Wh- and yes/no questions and recording their answers. **EFL.3.4.p.32.** Writes short community reports on trades and occupations, recording observations and brief quotes from the people who perform them.	**EFL.3.2.a.18.** Recognizes the people who carry out trades and work in the community as subjects of knowledge and agents of community life.

PROGRAMA PILOTO

Methodological Guidelines

To develop this competency, the learning situation invites learners to recognize that every occupation represents valuable knowledge and contributes to the well-being of the community. Through the project "The people who keep our place alive," children explore different forms of work and understand that knowledge is built through experience, practice, and the contributions of many people, regardless of their level of formal education or social recognition.

The class explores a wide range of occupations from their communities and reflects on how different types of work are connected and necessary for collective life. Learners investigate the tasks, tools, workplaces, and experiences of workers through conversations or visits, recognizing workers as sources of knowledge rather than simply subjects of description. They collect observations, record information, and identify why each occupation matters to the community.

The methodology that best fits this competency is Project-Based Learning (PBL), complemented by Inquiry-Based Learning and a community-service approach. Through the project "The Book of Community Workers," teams prepare and present short English reports based on real interactions with workers. Learners work in rotating roles: preparing questions, recording observations, collecting quotations, and writing the final report. This process allows every learner to participate in researching, listening, documenting, and communicating community knowledge.

Throughout the project, learners develop English vocabulary related to occupations, tools, workplaces, daily tasks, and expressions for reporting information from others. By creating a public collection of community workers' stories, learners use English to value diverse forms of knowledge, strengthen connections with their surroundings, and recognize the interdependence that sustains community life.

Interdisciplinary Connections

This competency connects English learning with Language and Literature, Social Studies, Natural Sciences, Mathematics, and Cultural and Artistic Education through the exploration of community occupations and the knowledge, practices, and experiences that sustain collective life. By interviewing workers, documenting their experiences, and creating short reports in English, learners use language to recognize different forms of expertise and understand the value of every contribution within their community.

Language and Literature supports the competency through the creation of short reports based on real conversations and observations. Learners practice organizing information, using quotations with attribution, describing experiences clearly, and expressing why a person's work is meaningful. These activities strengthen writing, reading, and communication skills.

Social Studies contributes through the exploration of occupations, community roles, and the histories behind different forms of work. Learners recognize how knowledge is passed between generations, how workers contribute to local identity, and how communities depend on the collaboration of many people.

Natural Sciences is integrated through the observation of the tools, materials, and processes involved in different occupations. Learners explore how workers use knowledge of natural phenomena and materials in their daily activities, such as understanding heat, water, plants, animals, or physical properties connected to their work.

Mathematics connects through the use of quantities, measurements, and numerical information found in community work. Learners identify examples such as production amounts, distances, time spent on tasks, or other data that help describe occupations and their contributions.

Cultural and Artistic Education enriches the competency through the creation of the Book of Community Workers, where learners combine photographs, drawings, and written texts to represent people and their work respectfully. Through visual organization and creative presentation, learners communicate the value and identity connected to different occupations.

Through these interdisciplinary connections, English becomes a tool for listening to community voices, recognizing diverse forms of knowledge, and communicating appreciation for the people whose work contributes to the life of the community.

PROGRAMA PILOTO

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.22. Solving everyday digital challenges through short infographics and visual explanations, supporting peers and families in using digital devices, and recognizing digital cooperation as collective learning. CC, CD, CIT.	I.EFL.3.22.1. Designs a short English-language infographic with at least three steps, illustrated with diagrams, icons, or drawings, to explain how to resolve a common difficulty with a digital device. I.EFL.3.22.2. Explains the procedure step by step using imperative forms, sequence connectors (first, then, next, finally), and clear visual cues so that a classmate or family member can follow it without additional explanation. I.EFL.3.22.3. Shares the infographic with at least one classmate or family member and checks whether the steps are clear, adjusting the text or images as needed.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.2.d.7. VEFL.3.4.d.12. Vocabulary for technology and digital devices: device names, parts, functions, and care practices used at home, at school, and in the community. **EFL.3.2.d.14.** Vocabulary for civic and school life: gatherings, celebrations, agreements, roles, shared spaces, rules, and school projects. **EFL.3.4.d.18.** Modals can, could, should, and must for ability, possibility, advice, and obligation: receptive and guided productive use in everyday transactions, guides, infographics, and agreements. **EFL.3.4.d.23.** Informational texts (guides, infographics, questionnaires): short factual texts that explain, instruct, or present data using numbered steps, headings, icons, and visual cues. **EFL.3.4.d.26.** Functional texts (invitations, warnings, agreements, school notices): short purposeful texts that organize shared life, set expectations, and communicate rights and responsibilities in the school and community. **EFL.3.4.d.30.** Collaborative written production: stages and strategies for drafting, revising, and sharing texts in pairs and small groups — planning with notes, writing a first version, giving and receiving short feedback, and presenting a final product.	**EFL.3.1.p.3.** Follows sequenced instructions in short videos to complete tasks, play games, and participate in classroom activities. **EFL.3.2.p.13.** Sustains short conversations about technological devices: name them, describe their use, and ask for help to solve a simple difficulty. **EFL.3.4.p.33.** Designs short infographics with diagrams and step-by-step instructions to help classmates and families solve common difficulties with digital devices. **EFL.3.1.p.38.** Uses images, gestures, sounds, and drawings to support comprehension and production when English words alone are not enough. **EFL.3.4.p.46.** Participates in the collective drafting of agreements and notices for the school's shared life.	**EFL.3.2.a.9.** Asks for help when needed and offers it when possible. **EFL.3.4.a.21.** Participates responsibly in collective agreements and in the care of shared school spaces. **EFL.3.3.a.24.** Is committed to responsible digital behavior: asks permission before sharing, cites sources, and respects what circulates in the classroom and online.

PROGRAM PILOTO

Methodological Guidelines

To develop this competency, the learning situation invites learners to understand digital literacy as the ability to read, use, and support others in navigating everyday digital environments. Through the project “Pocket Guides for the Everyday Screen,” children identify common digital challenges from their families and communities and transform them into short instructional guides that help others solve practical problems.

The class explores technology through a balanced perspective, recognizing digital devices as tools that require knowledge, care, and responsible use. Learners analyze everyday situations such as device maintenance, forgotten passwords, storage problems, or safe online practices, and develop solutions through observation, discussion, and testing. English becomes a tool to explain procedures, give instructions, and communicate safety recommendations.

The methodology that best fits this competency is Project-Based Learning (PBL), complemented by Inquiry-Based Learning and digital service-learning. In teams, learners create infographics with clear steps, sequence connectors, imperative verbs, and visual supports so that different users can follow the instructions. Through rotating roles, learners gather problems, draft solutions, design visual elements, and test their guides with real readers.

Through this process, learners develop digital awareness, problem-solving skills, and confidence in using English to communicate practical knowledge that supports their families and communities.

Interdisciplinary Connections

This competency connects English learning with Language and Literature, Social Studies, Natural Sciences, Mathematics, and Cultural and Artistic Education through the creation of digital instructional texts that respond to real needs in learners’ families and communities. By identifying everyday technological challenges, organizing solutions, and communicating procedures through infographics, learners use English to share knowledge, support others, and understand digital literacy as a form of community collaboration.

Language and Literature provides the foundation for this competency through the creation of short procedural texts. Learners organize information into clear steps, use imperative verbs and sequence connectors, revise their writing with a real reader, and recognize that instructional texts are designed to guide others through practical actions.

Social Studies contributes through the exploration of how digital knowledge circulates within communities and across generations. Learners recognize that people have different experiences with technology and that helping others use digital tools is part of cooperation, communication, and the exchange of knowledge among family and community members.

Natural Sciences is integrated through the understanding of everyday technological elements and responsible digital habits. Learners explore concepts related to devices, energy, charging, and connectivity, while reflecting on the importance of caring for their bodies through healthy practices such as appropriate screen time, rest, and posture.

Mathematics connects through the organization and interpretation of information in digital guides. Learners apply sequencing, counting, and simple data interpretation when organizing steps, arranging icons, and understanding information such as storage capacity or battery percentages.

Cultural and Artistic Education enriches the competency through the visual design of infographics and digital guides. Learners explore how images, icons, layout, and visual organization communicate meaning, creating materials in which text and visual elements work together to make information accessible to different audiences.

Through these interdisciplinary connections, English becomes a means to communicate practical knowledge, support digital inclusion, solve everyday problems, and develop collaboration, creativity, and responsibility in the use of technology.

PROGRAMA PILOTO

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.23. Creating warnings and agreements for school life through posters, identifying practices that ensure safety and care in shared spaces, and promoting collective responsibility in the school community. CC, CCCC.	**I.EFL.3.23.1.** Writes at least two short warnings or agreements in poster or notice form in English and in the community's languages, clearly stating what protects and what puts at risk those who share the school space. **I.EFL.3.23.2.** Negotiates with classmates the content of at least one agreement, using expressions of obligation, permission, and prohibition (must, can, can't, should) in a brief spoken or written exchange. **I.EFL.3.23.3.** States in one sentence why caring for common spaces is a shared responsibility, naming both adults and students as co-responsible parties.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.3.d.4. Familiarity with common everyday English text types, including short narratives, announcements, blog posts, illustrated messages, infographics, invitations, guides, and basic agreements used in school and community contexts. **EFL.3.1.d.5.** Knowledge of basic spoken and written English conventions, including capitalization, end punctuation (period, question mark, exclamation mark), basic comma use, common spelling patterns of high-frequency words, and basic pronunciation features such as short and long vowel sounds, word stress, and simple intonation patterns. **EFL.3.2.d.14.** Vocabulary for civic and school life: gatherings, celebrations, agreements, roles, shared spaces, rules, and school projects. **EFL.3.4.d.16.** Future with will and be going to: use of will for announcements and spontaneous decisions and be going to for plans and intentions in short texts and oral exchanges. **EFL.3.4.d.26.** Functional texts (invitations, warnings, agreements, school notices): short purposeful texts that organize shared life, set expectations, and communicate rights and responsibilities in the school and community.	**EFL.3.2.p.15.** Expresses respectful agreement and disagreement and suggest alternatives in short classroom discussions. **EFL.3.4.p.34.** Writes short warnings and agreements in posters and notices about everyday school situations, using obligation and prohibition forms. **EFL.3.4.p.46.** Participates in the collective drafting of agreements and notices for the school's shared life.	**EFL.3.2.a.10.** Treats with respect those who think or feel differently and takes others' reasons into account. **EFL.3.4.a.21.** Participates responsibly in collective agreements and in the care of shared school spaces.

PROGRAMA PILOTO

Methodological Guidelines

To develop this competency, the learning situation invites learners to understand rules and warnings as expressions of collective care and shared responsibility. Through the project "The Hallway That We Care For Together," children explore how agreements help communities protect the people who share a space and how warnings communicate risks in a respectful and meaningful way.

The class reflects on common school spaces and identifies what actions contribute to safety, respect, and coexistence. Learners create bilingual posters that combine agreements and warnings for different areas of the school, using English to express responsibilities, permissions, and recommendations. Through this process, they recognize that rules are not only restrictions but agreements created to care for others.

The methodology that best fits this competency is Project-Based Learning (PBL), complemented by Cooperative Learning. In teams, learners observe assigned school spaces, identify situations that require care, draft agreements and warnings in English, negotiate ideas with classmates, and design visual posters that communicate messages clearly to different audiences.

Through this process, learners develop communication skills, collaborative decision-making, and a sense of responsibility, using English as a tool to promote safe, respectful, and inclusive environments within their community.

Interdisciplinary Connections

This competency connects English learning with Language and Literature, Social Studies, Natural Sciences, Mathematics, and Cultural and Artistic Education through the creation of agreements and warnings that promote care, responsibility, and respectful coexistence in shared spaces. By observing their school environment, negotiating ideas, and communicating rules in English, learners understand that agreements are a form of collective knowledge that helps communities organize, protect, and support one another.

Language and Literature supports this competency through the creation of bilingual agreements, warnings, and instructional texts. Learners practice organizing ideas clearly, selecting appropriate words for different audiences, negotiating meaning with classmates, and using language structures that express obligation, permission, and prohibition in meaningful contexts.

Social Studies contributes through the exploration of how communities create, maintain, and renew shared rules. Learners recognize that agreements are connected to participation, cooperation, and civic life, understanding that different groups establish norms to organize common spaces and promote collective well-being.

Natural Sciences is integrated through the observation of risks and protective actions in everyday environments. Learners identify how school agreements can contribute to safety, health, and care for the body by considering situations related to movement, cleanliness, noise, rest, and the conditions of shared spaces.

Mathematics connects through the collection and organization of simple information from school observations. Learners count situations that require agreements or warnings, compare results from different spaces, and consider the balance between text and visual elements when designing their posters.

Cultural and Artistic Education enriches the competency through the design of visual messages that communicate meaning effectively. Learners create icons, organize bilingual layouts, and use images, colors, and composition to make agreements and warnings accessible to different audiences.

Through these interdisciplinary connections, English becomes a means to negotiate ideas, communicate shared responsibilities, understand community practices, and contribute to safer, more respectful, and inclusive environments.

PROGRAMA PILOTO

PROGRAMA PILOTO

Specific competency	Assessment indicators
SC.EFL3.24. Collaborating on the planning and creation of school projects through illustrated outlines, designing, organizing, and agreeing on collective actions, and recognizing shared creation as a means of transforming the school environment. CC, CIT, CMCT.	**I.EFL.3.24.1.** Plans a school project collaboratively by creating an illustrated outline that specifies what will be built or made, with which materials, by whom, and for what purpose, in at least four short English sentences or labeled sections. **I.EFL.3.24.2.** Distributes roles, tasks, materials, and timelines among classmates, either in writing or orally, using basic future forms (be going to, will) and sequence connectors, so that every member knows what to do. **I.EFL.3.24.3.** Presents the completed project to the school community in a short oral or visual presentation, explaining what was made, how it was made, and what the group learned from working together.

Knowledges		
Declarative	**Procedural**	**Attitudinal**
EFL.3.4.d.9. Vocabulary for weather, seasons, and the natural environment: climate, landscapes, ecosystems, plants, and animals of the place and other regions. **EFL.3.2.d.14.** Vocabulary for civic and school life: gatherings, celebrations, agreements, roles, shared spaces, rules, and school projects. **EFL.3.4.d.16.** Future with will and be going to: use of will for announcements and spontaneous decisions and be going to for plans and intentions in short texts and oral exchanges. **EFL.3.4.d.19.** Present continuous for ongoing and planned actions: use for what is happening right now and for near-future arrangements (We are meeting tomorrow). **EFL.3.4.d.26.** Functional texts (invitations, warnings, agreements, school notices): short purposeful texts that organize shared life, set expectations, and communicate rights and responsibilities in the school and community. **EFL.3.4.d.30.** Collaborative written production: stages and strategies for drafting, revising, and sharing texts in pairs and small groups — planning with notes, writing a first version, giving and receiving short feedback, and presenting a final product. **EFL.3.4.d.35.** The natural world of the place and other regions: ecosystems, landscapes, animals, and plants of Ecuador and the Americas, and the practices communities use to care for and live with the natural world.	**EFL.3.2.p.11.** Invites and agrees with classmates on tasks, gatherings, and celebrations using basic future forms and sequence connectors. **EFL.3.4.p.35.** Drafts illustrated planning outlines for a collaborative school project, deciding what to build, with what materials, with whom, and for what purpose. **EFL.3.4.p.44.** Inquires and records information about the natural world of the place and other regions through guided questions and simple note-taking. **EFL.3.4.p.45.** Compares the landscapes, climates, plants, and animals of Ecuador with those of other regions using short descriptive sentences and basic comparative forms. **EFL.3.4.p.47.** Plans a task, celebration, or school project with classmates by distributing roles, materials, and timelines. **EFL.3.2.p.48.** Cooperates with others in collective productions and share orally what has been learned at the close of a stage or project.	**EFL.3.4.a.19.** Cares for living beings and places mentioned in classroom activities, demonstrating responsibility toward the natural world. **EFL.3.4.a.20.** Recognizes the natural world of Ecuador and the Americas as a shared home that deserves attention and protection. **EFL.3.2.a.22.** Cooperates with classmates in shared tasks and projects, sustaining the collective effort from beginning to end.

PROGRAM PILOTO

Methodological Guidelines

To develop this competency, the learning situation invites learners to understand school projects as opportunities to plan, collaborate, and create meaningful contributions to their community. Through the project “What our school does not yet have, and we will make,” children identify a need or opportunity in their school environment and work together to design and develop a useful product.

The class explores how ideas become achievable projects through planning, organization, and shared responsibility. Learners define what they want to create, identify materials and resources, distribute tasks, and prepare presentations that explain the purpose, process, and people involved in their project. English is used as a working language to describe plans, express future actions, organize steps, and communicate decisions.

The methodology that best fits this competency is Project-Based Learning (PBL), complemented by Design Thinking during the planning stage and Cooperative Learning through collaborative roles. In teams, learners create an illustrated project outline, a task and timeline chart, and a short presentation. Through rotating roles, they experience different stages of the process, including planning, organizing, creating, and communicating their work.

Through this process, learners develop creativity, collaboration, problem-solving, and responsibility, using English as a tool to transform ideas into collective actions that contribute to their school community.

Interdisciplinary Connections

This competency connects English learning with Language and Literature, Social Studies, Natural Sciences, Mathematics, and Cultural and Artistic Education through the creation of instructional digital guides that allow learners to communicate solutions, share knowledge, and support others in the responsible use of technology. By identifying everyday digital challenges, organizing procedures, and explaining solutions in English, learners use language as a tool to collaborate, solve problems, and participate in their communities.

Language and Literature supports the competency through the creation and interpretation of instructional texts. Learners practice organizing information into clear steps, using sequence connectors and imperative forms, adapting their writing to a specific reader, and revising their guides after receiving feedback. Through this process, they develop the ability to communicate procedures clearly and effectively across languages.

Social Studies contributes through the exploration of technology as a social practice connected to cooperation, access, and the exchange of knowledge between generations. Learners recognize that digital skills are not only individual abilities but also forms of community support, as people share solutions, help others overcome technological challenges, and contribute to collective well-being.

Natural Sciences is integrated through the exploration of concepts related to devices, such as energy, charging, signals, and the responsible care of technology. Learners connect digital practices with healthy habits, including the importance of protecting their senses, maintaining appropriate use of screens, and understanding how technological devices interact with physical resources.

Mathematics connects through the organization and analysis of information within digital guides. Learners use sequencing, counting, percentages, and simple measurements when describing procedures, organizing steps, interpreting storage capacity or battery levels, and arranging visual elements within the infographic.

Cultural and Artistic Education contributes through the visual design of the digital guides. Learners explore the relationship between text and image by creating icons, diagrams, layouts, and visual representations that make instructions accessible to different audiences. Through these choices, they develop creativity, visual communication, and awareness of how design influences understanding.

Through these interdisciplinary connections, English becomes a means to explain procedures, share knowledge, support others, and participate responsibly in a digital community. Learners understand that technology is not only a collection of devices, but also a shared space where communication, creativity, problem-solving, and cooperation take place.
